## General Trends

Most assessments of economic pessimism are rebounding from record lows in 2010, but several repercussions of the Great Recession are continuing unabated.

In 2010, a record 37.3% said recent changes in their finances had left them worse-off. (For the wording of this and all other questions see Appendix 1: Question Wordings.) This dropped to 30.1% in 2012, but that was still the second highest level during the last 40 years. (Trends for this and other measures are shown in the accompanying graphs and details appear in the attached tables.) Satisfaction with personal finances also improved from the record low in 2010 when 31.5% were “not at all satisfied.” In 2012, only 28.0% were not satisfied and this was marginally lower than levels in 2008 and in 1983 during another deep recession.

Along with the unemployment rate, people’s perceptions of their job prospects also improved over the last two years. In 2010, a record high of 16.3% thought it was very or fairly likely that they would lose their job. This fell to 11.1% in 2012 which is only a little higher than the 1977-2012 average of 10.4%. There was also a decrease in those saying it would not be easy to find an equally good job if they lost their present one. In 2010, a record 52.4% said finding equivalent employment wouldn’t be easy. In 2012, this dropped to 45.7%, but that was still above the 1977-2012 average of 40.0%.

The economic setbacks of the Great Recession also led to people lower their ratings of their socio-economic standing. In 2010, a record 35.4% said their income was below average. This dipped to 32.5% in 2012, but that was still the second highest level in the last 40 years. Assessments of social class position did not improve at all. In 2010, 8.2% said they were in the “lower class” and this marginally increased in 2012 to a record high of 8.4%. Also, in the three surveys since 2008, identifications as “working class” slightly outnumbered those designations as “middle class.” Overall, across the last 40 years, 45.8% self-identified as “working class” and another 45.8% as “middle class.”

Most Americans are hopeful about long-term, economic prospects, but those outlooks were dimmed by the recent economic downturn. Pessimism over inter-generational mobility rose during the Great Recession. In 2010, 17.9% said they expected their children to be somewhat or much worse-off than they are. This rose to 19.5% in 2012. But both figures were lower than record levels of 20-22% in 1994-1996. When asked to compare their standard of living to their parents, those saying they were somewhat or

much worse-off than their parents were at record levels in 2010 and 2012. Moreover, the level saying they were worse-off marginally increased from 16.2% in 2010 to 16.4% in 2012.

Overall, evaluations of economic well-being generally hit record lows in 2010 with pessimistic economic judgments reaching high points. Most indicators improved in 2012, but generally remained well above long-term levels. But several measures showed no improvement and were marginally above the 2010 levels. Those showing no improvement in 2012 were identifications as lower class, those saying they were worse-off than their parents, and those predicting that their children would be worse-off than they are.

## Trends by Selective Socio-Demographics

---

Most gender differences on the measures of economic well-being are small. Women tend to be slightly more pessimistic about recent economic changes and their level of financial satisfaction. Over the 40-year period, women were more likely than men to say that recent changes to their personal finances had left them worse-off (by 2.7 percentage points). In general, women have been slightly more likely to say they are not satisfied with their financial situation (by 1.2 points).

In terms of job prospects (how likely they are to lose their job), since 1977 the gender differences have been small (0.5 point), but men had greater concerns than women did in 2008 and 2010 while women's concerns topped those of men in 2012. Likewise, since 1977 men have been more likely than women to think they could *not* find an equally good job (by 2.4 points), but in 2012 women were marginally more pessimistic than men were (by 0.4 point). These switches point to the feminization of the impacts of the Great Recession with men being impacted in the early stage (e.g. by unemployment in construction) and women more affected later on (e.g. by rising unemployment in the government sector).

In terms of socio-economic standing women have been a bit more likely than men to say their income was below average (by 2.4 points), but there was no meaningful differences on social class rankings.

Women are a little less pessimistic than men about their children's economic prospect (by 2.3 points) from 1994-2012 and that difference increased in 2012 to 5.5 points. There were very little gender differences on comparisons of their standard of living to that of their parents.

Over the last 40 years fewer 18-34 year olds have said their financial situation has gotten worse (18.7%) than older age groups (35-49=23.9%, 50-64=25.6%, 65+=22.5%). This age differential widened in 2012 with 21.9% of those 18-34 worse-off compared to 31.2% for 30-49, 36.5% for 50-64, and 34.0% for 65+.

But financial dissatisfaction has been highest among those under 35 over the last 40 years with 29.5% not at all satisfied. It then falls as age rises to 27.9% for 35-49, 22.9% for 50-64, and 14.7% for 65+. But the Great Recession not only raised the overall financial dissatisfaction level, but affected adults 50-64 more than others. In 2010 and 2012, those 50-64 had the highest level of dissatisfaction (respectively 35.4% and 32.6% compared to overall levels of 31.4% and 28.0%).

Younger workers with less job seniority are most concerned about losing a job, but the older adults are most likely to say it would not be easy to find an equally good job if they lost employment.

Those 50-64 also showed a disproportionate rise in rating their income as below average. In 2010 and 2012, they were the age group most likely to say they were below average (40.8% in 2010 and 35.0% in 2012) and these were about 10 percentage points above the overall levels for those years while over the last 40 years they had generally rated themselves more positively than the young and the old did. There are only small age differences on social class rankings and no notable recent changes in those differences.

Over the last 40 years, those under 35 have been the least pessimistic about their children's future position and that edge widened in 2010 and 2012. In 2010, 10.3% of those 18-35 thought their children would be worse-off while 24.5% of those 65+ thought so. In 2012, it was 9.2% for those under 35 and 30.4% for those 65+. When comparing themselves to their parents, those 65+ are the least pessimistic. Since 1994 just 5.9% of those 65+ said they are worse-off. For younger adults 14-16% said they were worse-off than their parents. This pattern did not appreciably change during the Great Recession.

Large educational differences usually appear on these evaluations of economic well-being. Those with college education are less likely to see themselves as economically worse-off than those with a high school degree or those who never completed high school. In 2012, 26.2% of the college educated were worse-off as were 30.9% of those with a high school degree and 36.5% of those without a degree. Likewise, being not at all satisfied with one's economic situation declines with education. In 2012, it was 19.8% for the college group, 30.8% for the high school grads, and 38.1% for those without any degree.

Negative outlooks about jobs also increase as education declines and this gap widened during the Great Recession. In 2012, 5.5% of the college educated thought it very or fairly likely that they would lose their job compared to 12.0% of high school grads, and 26.2% of those without any degree. Likewise, perceived prospects of finding an equivalent job if unemployment occurred was bleakest among those without any degree and most hopeful among the college educated. In 2012, those saying it would not be easy to find

an equivalent job declined from 60.1% among the degreeless to 46.8% with a high school degree and 40.1% among the college educated.

Large differences separate educational groups on their perceived socio-economic standing. In 2012, 17.1% of the college educated said their incomes were below average and that rose to 36.6% of the high school educated and 55.1% of those without any degrees. These gaps have grown over time. Social class ranking is also closely tied to education. In 2012, 3.0% of those college educated placed themselves in the lower class compared to 9.4% of high school grads and 18.4% of the degreeless. These differences have also increased over the years.

Despite the large differences on socio-economic position and job prospects, perceptions about intergenerational changes were fairly small. Since 1994, 14.8% of the college educated thought their children would be worse-off as did 16.5% of the high school grads and 16.4% of those without any degrees. Similarly, there were only small differences across educational groups when comparing their current standard of living to that of their parents (13-14% worse-off across all years). Thus, the different educational groups have similar assessments of past and future mobility across generations.

The data in this report are from the General Social Survey. The GSSs are full probability, in-person samples of adults living in households in the United States. Data have been collected by NORC at the University of Chicago. Core support for the GSS comes from the National Science Foundation. Information on the GSS and the GSS data files are available at <http://www.norc.org/GSS+Website>.

## **Appendix 1: Question wordings**

### **FINALTER**

During the last few years, has your financial situation been getting better, worse, or has it stayed the same?

### **SATFIN**

We are interested in how people are getting along financially these days. So far as you and your family are concerned, would you say that you are pretty well satisfied with your present financial situation, more or less satisfied, or not satisfied at all?

### **JOBLOSE**

Thinking about the next 12 months, how likely do you think it is that you will lose your job or be laid off-very likely, fairly likely, not too likely, or not at all likely?

### **JOBFIND**

About how easy would it be for you to find a job with another employer with approximately the same income and fringe benefits you now have? Would you say very easy, somewhat easy, or not easy at all?

**FINRELA**

Compared with American families in general, would you say your family income is far below average, below average, average, above average, or far above average? (PROBE: Just your best guess.)

**CLASS**

If you were asked to use one of four names for your social class, which would you say you belong in: the lower class, the working class, the middle class, or the upper class?

**KIDSSOL**

When your children are at the age you are now, do you think their standard of living will be much better, somewhat better, about the same, somewhat worse, or much worse than yours is now?

**PARSOL**

Compared to your parents when they were the age you are now, do you think your own standard of living now is much better, somewhat better, about the same, somewhat worse, or much worse than theirs was?

## Financial Situation Has Been Getting Worse during the Last Few Years

## Not Satisfied at All with Family Financial Situation

## Very or Fairly Likely to Lose Job

## Not Easy to Find an Equally Good Job If Present Job Is Lost

# Family Income Below Average

## Rates Self as in the Lower Class

## Children Will Be Worse than My Standard of Living

## Worse than Parents' Standard of Living
