

CATHERINE C. HAGGERTY

EDUCATION

- Graduate Certificate University of Wisconsin, Stout, Evaluation Studies, 2020
- M.B.A. Keller Graduate School of Management, 2010
- M.P.M. Keller Graduate School of Management, with distinction, 2000
- B.S. State University of New York, College at Brockport, Sociology, Psychology, 1977

PROFESSIONAL EXPERIENCE

NORC at the University of Chicago, Chicago, IL

Vice President, Economics, Justice and Society **2012-Present**

Previously: Associate Department Head (2006-2012), Senior Research Director I-II (1997 – 2006), Director, Telephone Center (1992 – 1996); Research Director I and II (1987-1992).

Manage all aspects of survey research for data collection projects including sample selection, listing, screening, questionnaire development, focus groups, pilot testing, systems development and testing, remote and in-person training, data collection, records abstraction, reporting, data preparation, data delivery, and documentation. Assist department head in managing the department and in leading strategic investment initiatives for the organization.

RAND CORPORATION, SANTA MONICA, CALIFORNIA

Telephone Center Manager **1985-1986**

INSTITUTE FOR SOCIAL SCIENCE RESEARCH, UNIVERSITY OF CALIFORNIA, LOS ANGELES, 1978-1985

Director of the Telephone Survey Center **1984-1985**

Survey Coordinator, CATI Supervisor, Interviewer Supervisor, Interviewer Monitor, Data Abstractor, Assistant Sampler, Lister, Interviewer **1978-1984**

MAJOR NORC STUDIES

Survey of Consumer Finances (SCF) Project Director, Triennial Surveys, 2001-present. Sponsored by the Federal Reserve Board, the SCF is conducted every three years. NORC has collected these data since 1992. U.S. households are surveyed to determine their financial characteristics and behavior; to provide guidance to policy makers concerned with unemployment, inflation, interest rates, and saving; and to calculate wealth accumulation in the nation. These data are collected using a dual-frame sample: a national area probability sample of households and a list sample known to include a high proportion of high-income households.

Making Connections Project Director, 2001-present. Multi-year, in-person and telephone data collection in poor urban neighborhoods in ten U.S. cities. This project is centerpiece of Annie E. Casey Foundation's multi-faceted effort to improve the life chances of vulnerable children by

helping strengthen families and neighborhoods. NORC and its subcontractor The Urban Institute are conducting all phases of survey design, implementation and data analysis. Periodic and ongoing data deliveries. Three rounds of data have been collected and delivered; data users' workshops conducted 2009-2013. Providing technical assistance to those currently conducting analyses.

The Survey of Economically Successful Americans and the Common Good (SESA) Project Director 2010-2013. NORC identified and helped to test the goodness of fit of the sample frame and advised on questionnaire content and design. The project aims to understand the political influence of the wealthy, their philanthropic engagement, and their attitudes and beliefs regarding a range of public policy issues.

Houston Foreclosure Survey, Co-PI, 2009 – 2011. This panel study of residents notified that their house will be foreclosed will help to inform policy makers on factors contributing to foreclosure and outcomes of foreclosed-upon households after foreclosure. The study aims to explore individual consumption patterns that could have contributed to the current housing, and more general economic, situation and the role policy played in consumer behaviors.

Housing Transformation Surveys, Project Director, 2002-2011. For the John D. and Catherine T. MacArthur Foundation and the Chicago Housing Authority (CHA), NORC is designing and conducting a series of surveys (baseline and follow-up) of public housing residents who are being relocated to alternative housing as part of a major urban transformation initiative in the metropolitan area. Sample design, questionnaire design, locating, cognitive interviews, in-person surveys with adults and youth, validation, links to administrative datasets, and client reports. Four rounds of interviews and reports have been completed to date.

The Housing and Neighborhood Study Corporate Oversight, 2010. This pilot for the NYC Department of Housing Preservation and Development will collect data from one treatment and two control groups to evaluate subsidized housing in NYC. This evaluation is part of The New Housing Marketplace Plan (NHMP) an ambitious 7.5 billion dollar plan to fund the creation and preservation of more than 165,000 homes and apartments over a ten year period in NYC. It is the largest municipal housing project in the nation's history.

American Time Use Survey (ATUS). Project Director, 2001-2003. Conducted by NORC for the U.S. Department of Labor, Bureau of Labor Statistics. The Bureau is collecting systematic data on time use in America through a telephone survey in which respondents are asked about how they used their time on a designated day. The time diary is an interviewer-administered open-ended questionnaire on the respondent's activities on the designated day. NORC conducted a cognitive test of the time diary with both English- and Spanish-speaking respondents. NORC also conducted a pretest in which the effects of having respondents use an advance diary was studied. In this pretest, half the respondents received by mail a diary to complete on a designated day. This diary served as a memory aid while completing the time diary during the telephone interview. The other half received no diary but completed the same telephone interview. The diary did not improve data quality.

Survey of Small Business Finances (SSBF). Project Director, 1998-2000. This is a study sponsored by the Federal Reserve Board and is the third in a series, conducted every five years, to examine small business' access to credit. NORC screened 36,000 businesses for eligibility and conduct interviews with a national sample of 6,000 business owners; this survey includes an oversample of African American, Asian and Hispanic owned business. NORC conducted a methodology study, which included cognitive interviews and focus groups, in addition to two

pretests, to help inform changes to the questionnaire and the development of survey protocols and procedures.

Comprehensive Data Collection and Support Services for the Agency for Toxic Substances and Disease Registry (ATSDR). Telephone Task Leader, *1998-2002*. Under a general tasking agreement with ATSDR that has been in place since 1992, NORC conducts studies that evaluate the relationship between exposure to hazardous substances and adverse health outcomes, including health investigations, surveillances, registries, and analytic epidemiologic surveys. Each of the task orders is rapid turnaround, often requiring the studies to be fielded within 48 hours to 2 weeks of task order notification.

Medical Expenditure Panel Survey (MEPS), Medical Provider Survey Component. Project Director, *1997-2000*. The large-scale MEPS survey continues the series of medical expenditure studies sponsored by the Agency for Health Care Policy and Research and collects data from a nationally representative sample of about 36,000 persons in 15,280 households. Data are collected on the medical care use and expenditure patterns of families, followed by interviews with medical providers and employers and other sources of health insurance for these families.

For the Medical Provider Survey (MPS) Component, NORC, collects data from office-based providers nominated by the household respondents. The first wave of the MPS obtained an 88 percent response rate from a sample of 7,500 members of this hard-to-survey population. The second wave of the MPS also obtained an 88 percent response rate from a sample of 7,700 office-based physicians.

National Study of Health and Life Experiences of Women and Their Partners. Project Director, *1996-1997*. This is a longitudinal study conducted every five years to examine the long-range effects of alcohol use and abuse among women. During the third round, the study was expanded to include the partners of women as well as the women themselves. NORC located and interviewed a sample of 712 women who were interviewed in the 1991 survey, along with 369 of their spouses and partners. In 1996 these women were between 25 and 54 years old. Some were from the original sample; others from a new cohort introduced in 1991. NORC also was responsible for developing and pretesting the questionnaire.

Twin Study of Vulnerability to Alcoholism. Project Director, *1996-1998*. The Harvard Twin Study, using data from the Vietnam Era Twin (VET) Registry, demonstrated that vulnerability to alcohol abuse has a significant genetic influence. This research builds on previous work by identifying the biological and psychological factors that mediate this genetic influence and characterize their mechanism(s). Four hundred twin pairs were randomly selected from among 1,356 twin pairs interviewed in a previous study who did not serve in Vietnam during the war. The twins were transported to participating sites at Boston or Davis, California, to be evaluated using putative vulnerability indicators, selected from the following domains: (a) neuropsychological; (b) psychophysiological functioning; (c) psychopathology; and (d) personality and behavior. Data were gathered from 200 MZ and 200 DZ twin pairs.

Process Evaluation of Title I of the 1994 Crime Act 1 (Community Oriented Policing Services [COPS]). Project Director, *Wave 1, 1997*. Funded by the National Institute of Justice, this was a three-wave CATI study of police chiefs to ascertain implementation of and compare perspectives on community oriented policing services. NORC developed and tested the survey instruments, and collected data from a national list sample of whom three-fourths were grantees and one-fourth were non-grantees.

Nationwide Survey of Public Attitudes on Gun Violence Issues. Project Director, *1996-1997*. Conducted for the Johns Hopkins Center for Gun Policy Research and sponsored by the Joyce Foundation, this was a nationwide survey to assess attitudes on gun violence issues. A particular focus was on gun control laws and other public policy aspects of the problem. Data were also collected on public attitudes toward gun advertising and toward new gun safety technology.

Gun Violence and Physician Experiences: A National Study. Project Director, *1996*. Conducted for the American College of Physicians, this was a CATI survey of 2,062 physicians concerning their experiences, knowledge, and attitudes about gun violence and gun control policy.

Baccalaureate and Beyond Longitudinal Study (B&B) First Follow-up. Task Leader for Telephone Data Collection, *1993-1995*. Baccalaureate and Beyond was conducted for the U.S. Department of Education. It follows a sample of students who graduated from four-year colleges and universities in the academic year 1992-93, as they move beyond colleges and universities into the world of work or to graduate or professional education. This wave of the study used CATI as its primary data collection mode, supplemented by in-person interviews; it involved extensive use of automated systems.

Resident Travel Cost Survey. Project Director, *1994*. This study was conducted for the Environmental Economics Research Group and sponsored by the Florida Department of Environmental Protection. This was a quick-turnaround CATI survey—only five weeks to set up the questionnaire and collect and deliver the data. Residents in a 100-mile radius of the Tampa Bay area were surveyed using random-digit-dialing (RDD) to find out about their use of salt water (fishing, boating, and swimming).

SF-36 Health Status Survey. Project Director, *1995*. This study was conducted for Eli Lilly. The SF-36 instrument was administered by telephone to 650 subjects recruited at four sites (two in Boston and two in Indianapolis).

1993 and 1994 Annual Metro Chicago Surveys. Project Director, *1992-1994*. Conducted for the Metro Chicago Information Center, these were omnibus surveys of Chicagoans in the six-county metropolitan area, to gather information on a variety of public interest issues. Data were collected by CATI from an RDD sample.

Survey of Physicians about the Medicare Program and Fee Schedule. Telephone Center Director, *1993-1994*. Sponsored by the Physician Payment Review Commission, this survey sought to collect information about physicians' understanding of and experience with the Medicare Fee Schedule and Volume Performance Standards. Specifically, 1,000 physicians were asked about their experience with different payers, including Medicare; changes in practice patterns; their understanding of the Medicare Fee Schedule and Volume Performance Standards; problems they had experienced with the fee schedule; and coding and payment for visits and consultations. These data were obtained through a 20-minute interview via CATI.

National Education Longitudinal Study of 1988 (NELS:88). Telephone Center Director, *1988-1992*; Task Leader for Telephone Data Collection, *1992-1994*. Sponsored by the National Center for Education Statistics of the US Department of Education, NELS:88 is a longitudinal national probability sample of eighth graders in the United States. It also encompasses parents, teachers, and principals of selected students; over 60,000 respondents were surveyed in the base year (1988). The second follow-up surveyed respondents in their senior year, as they left high school and prepared to

pursue higher education, enter the work place, and start families; the third follow-up collected data from them two years later, when they were young adults.

High School and Beyond (HS&B) Fourth Follow-Up Survey. Telephone Center Director, *1992-1993*. Sponsored by the National Center for Education Statistics of the US Department of Education, HS&B began in 1980 with a survey of 58,000 high school seniors and sophomores. Samples of both the senior and sophomore cohorts of this initial population were then resurveyed at two-year intervals through 1986. The 15,000 respondents surveyed during the fourth follow-up were a sample of the members of the sophomore cohort. The fourth follow-up investigated persistence in postsecondary education and the attainment of postsecondary degrees, collected labor histories, and allowed comparison between the experiences of individuals who finished high school and those of individuals who did not. Data were collected using CATI. The fourth follow-up also collected and coded postsecondary education transcripts.

Evaluation of the Job Training Partnership Act (JTPA). Telephone Center Director, *1987-1991*. A five-year, Congressionally-mandated, evaluative experiment conducted in selected JTPA Service Delivery Areas for the US Department of Labor under a subcontract with Abt Associates. The JTPA Evaluation baseline experiment (1987-1989) tracked and compared the activities of persons who participated in JTPA training programs (the treatment group) and those who did not (the control group). Approximately 20,600 respondents were selected for the experiment; two-thirds were assigned to the treatment group and one-third to the control group. NORC's role for the JTPA baseline included collecting data in four sites from members of the control group and for 3,000 eligible nonparticipants (ENPs). Data were collected using CATI and through personal interviews as appropriate. NORC also conducted listing in the Service Delivery Areas. The JTPA first follow-up survey (1989-1990) sought data on the activities of all 23,600 respondents through computer-assisted telephone interviews, with in-person interviews employed as appropriate. A second follow-up was conducted in 1991. Responsible for supervising the systems design, implementation, and functioning for both the baseline experiment and the first follow-up.

1990 National Survey of Functional Health Status. Telephone Center Director, *1990*. This survey sought to obtain national normative data on the questionnaire used in prior studies and to explore how measures of quality of life and other social factors relate to the health care status and well-being of the elderly. The nationally representative sample included 2,909 respondents to NORC's 1989 and 1990 General Social Survey (GSS) augmented by 342 elderly. Methodological comparisons between telephone and mail administration were conducted.

Medical Professionals' Attitudes Toward AIDS. Survey Director, *1990*. Conducted for John Colombotos of the Columbia University School of Public Health, and funded by the National Institutes of Health, this study collected data from a national sample of 1,200 physicians and 1,500 nurses in 25 states and the District of Columbia. It provided useful information for the development of AIDS education programs for health care workers, and will have an impact on the formulation and implementation of policies dealing with mandatory testing, antidiscrimination laws, and other key issues. This was a mail and telephone survey with mail and telephone follow-up. Responsible for telephone data collection.

1987 National Medical Expenditure Survey (NMES-2). Associate Project Director, Health Insurance Plan Survey, *1987-1989*. NMES-2 was conducted under subcontract to Westat, Inc., for the National Center for Health Services Research and Health Care Technology Assessment (NCHSR) and the Health Care Financing Administration (HCFA), US Department of Health and

Human Services. This study measured use of and expenditures for medical care in 1987 through multiple components, some of which were linked, including a five-round survey of 14,000 households, representing the civilian non-institutionalized population, and a survey of direct care providers in 700 nursing homes and 775 homes for the mentally retarded regarding the health care services provided to approximately 11,000 individuals residing in those institutions and relatives of these individuals. Also included were surveys of 14,500 employers, unions, or insurers, and 14,000 medical providers. Responsible for Health Insurance Plan Survey data collection.

Follow-Up to the Survey of Physicians' Practice Costs and Incomes. Survey Director, 1987-1988. Sponsored jointly by the Assistant Secretary for Planning and Evaluation and the Health Care Finance Administration, this study collected information across a number of specialty groupings on the time and complexity involved in performing medical procedures, malpractice costs, and whether the respondents had signed or planned to sign the Medicare Physician Participation Agreement. Responsible for data collection.
