From Community Health Needs Assessment (CHNA) to Implementation

- 2.5 million people were hospitalized due to injuries in 2014.
  - [https://www.cdc.gov/injury/wisqars](https://www.cdc.gov/injury/wisqars)
- 26.9 million people were treated in an emergency department for injuries in 2014.
  - [https://www.cdc.gov/injury/wisqars](https://www.cdc.gov/injury/wisqars)
- 2X as many victims and perpetrators of interpersonal violence were exposed to childhood abuse and domestic violence.
  - [https://doi.org/10.1177/0886260502238733](https://doi.org/10.1177/0886260502238733)

Hospitals are vital community assets that can guide and support responses to pressing health needs.

- Hospitals can prevent injuries and violence in their communities.
- CHNA prioritizes health needs and reveals toll of injury and violence.

CHNA Implementation Plan is a blueprint for how hospitals and stakeholders will address priority health needs.

Hospitals have impact when they...
- Invest resources to address social determinants of injury and violence.
- Think holistically and implement efforts, such as trauma-informed care and community development, that address the system.

CHNA puts public health, hospital, clinical, law enforcement and neighborhood data on the table and measures progress on priorities.
