ACKNOWLEDGEMENTS

The authors express their sincere thanks to all those that contributed to the design of the survey, collection of the data and production of this report. We are grateful to Chicago Housing Authority staff Meghan Harte, Rayne Martin and Carmen Tomshack for sharing information about the relocation process as it evolves over time.

We appreciate the support of Central Advisory Council members Olomenji O’Conner and Mary Wiggins, ad Local Area Council Presidents Sandra Young, Deverra Beverly, Mary Baldwin, and Francine Washington and CHA Senior Advisor to Board of Commissioners Darnetta Tyus.

We thank Susan Lloyd, Spruiell White, and Erica Poethig for their continued encouragement of this research and the MacArthur Foundation for providing the funding.

We are especially grateful to the leaseholders who generously devoted their time and shared their experiences.

TABLE OF CONTENTS

EXECUTIVE SUMMARY	11-13
Section 1: The Leaseholders and Their Households.....	17
Section 2: Housing Choices and Current Housing Status.....	20
Section 3: Current Housing Unit and Neighborhood	23
3.1 Leaseholders' Location at Time of Interview	23
3.2 Knowledge of Neighborhood Prior to Move	30
3.3 Condition of Current Unit and Satisfaction	30
3.4 Characteristics of the Neighborhood	33
3.5 Living Outside of Public Housing	37
Section 4: Social Exchange and Neighborhood Involvement.....	39

EXECUTIVE SUMMARY

Over a period of ten years, the Chicago Housing Authority (CHA) is replacing or rehabilitating substandard public housing developments as part of the city of Chicago's Plan for Transformation. During the Transformation, the CHA is assisting displaced leaseholders in finding other housing in the private market or in other public housing units. The Resident Relocation Survey reports on the relocation experiences of current and former leaseholders of the CHA. With funding from the John D. and Catherine T. MacArthur Foundation, NORC at the University of Chicago conducted a follow-up survey of the Phase III leaseholders between late 2004 and early 2005.

Prior to the Phase III baseline survey a systematic random sample of the Phase III population was drawn; the Phase III follow-up sample was identical to that used for the Phase III baseline. The sample included those interviewed during the baseline and those not interviewed and still eligible at the time of the follow-up. Of the 400 sampled leaseholders, interviews were completed with 357 respondents. This report presents findings on the following: the demographic characteristics of leaseholders and their households, housing choices, the housing units and neighborhoods to which the leaseholders moved, social integration and neighborhood involvement, children, economic hardship, leaseholders' health, need for and use of social services, finding an apartment, and overall satisfaction with relocation.

Most of the leaseholds interviewed were at or within ten miles of their original location at the time of the follow-up interview. Household size ranged from one to thirteen, with an average of 3.2 members per household. The number of adults in the household ranged from one to five. About two-thirds of the households in which an interview was conducted had children and the number of children living in these households ranged from one to nine.

The majority of leaseholders selected public housing as their permanent housing choice, with most of the balance choosing to move to private housing with a Housing Choice voucher (HCV). Of those leaseholders choosing HCV housing, most were permanently relocated at the time of the follow-up survey. In contrast, only about one-fifth of leaseholders choosing public housing were permanently relocated at that time.

Most leaseholders who had moved by the time of the follow-up survey, either to temporary housing or to their permanent choice, reported that their unit was either in excellent or good condition when they moved in. Most apartment amenities asked about were available and working when the leaseholder moved in, with the exception of laundry facilities. Most leaseholders felt their building was either very well or well maintained. Most leaseholders who had moved thought their current neighborhood was better than their former neighborhood.

All leaseholders were asked about the neighborhood in which they lived. They were asked about how big a problem drinking in public, selling or using drugs, and other issues were in the neighborhood. Differences in reports of neighborhood problems were observed between those who had moved out of their original units, buildings and developments and those who had not. Leaseholders who had not moved reported the issues asked about to be big problems

or somewhat of a problem significantly more often than those who had moved. When compared to data from a large survey of Chicago communities, the neighborhood characteristics of leaseholders who had moved compared quite favorably against Chicago communities as a whole. However, the neighborhood characteristics of leaseholders who had not moved compared less favorably.

When asked about what they liked best about living outside of public housing, leaseholders in HCV housing reported safer neighborhoods and a nicer apartment as two main things they liked. The biggest problem with living outside public housing was financial hardships; however, more than half reported having had no problems living outside of public housing.

Both leaseholders who had moved and those who had not were asked about their involvement with their neighborhoods. They were asked about activities and organizations, actions to improve their community, familiarity with their neighbors, and giving and receiving help. In general, whether the leaseholder had moved from his/her original unit, building and development affected how involved they were with their neighborhoods. Leaseholders who had moved were, at the time of the follow-up survey, not as involved as compared to leaseholders who had not moved and as compared to their involvement before moving. Leaseholders who had not yet moved appeared to be more involved in social activities and organizations than those who had moved. However, those who moved reported being more involved before their move. Similarly, in reports of activities to take care of local problems, such as talking to local officials or attending meetings, leaseholders reported being more involved before they moved. In addition, as expected, leaseholders who moved have a harder time identifying outsiders in their neighborhood and have fewer friends and relatives in their neighborhood.

The leaseholder was asked to report on one child selected at random from all household members under the age of 18 years. In most household, the same focal child asked about in the baseline was the focal child for the follow-up interview. This focal child was usually the son or daughter of the leaseholder. Most leaseholders reported that they were satisfied with the school their child attended. For children who transferred schools, about half of leaseholders said they were more satisfied with the new school. About one-quarter of leaseholders were less satisfied. Most children had safe places nearby to play outside. However, children living in HCV housing more often had safe places to play outside than children in public housing.

Leaseholders were asked about some economic hardships they may have experienced in the last year. Having their telephone disconnected or going without a telephone was the hardship reported most often, with just under a third of leaseholders reporting experiencing this hardship.

The leaseholders were asked to report on their health status. Many reported that their health was excellent, very good, or good. However, compared to national estimates, the leaseholders reported excellent, very good, or good health less often and fair or poor health more often. With respect to specific health problems, the leaseholders most frequently reported experiencing high blood pressure, vision problems, arthritis/rheumatism, emotional problems,

asthma and diabetes. For many health problems, more than half of leaseholders indicated that the problem interfered with their daily activities either some or a lot. Compared to national estimates, the leaseholders had higher reports for high blood pressure, vision problems, arthritis/rheumatism, asthma, diabetes, hearing problems, stroke and cancer. As expected, older leaseholders reported more health problems than younger leaseholders.

As in the baseline survey, leaseholders did not report many needs for social services. Just over a third reported needing no services. Leaseholders needing services most often reported needing help with paying bills, finding a job, and rebuilding their credit history. For many of the services, the majority of leaseholders reported receiving help.

INTRODUCTION

In 2000, the Chicago Housing Authority (CHA) embarked on an ambitious Plan for Transformation, a 10-year plan in which substandard high-rise public housing developments would be either rehabilitated or demolished and replaced. During the Transformation, the CHA is assisting displaced leaseholders to other housing, either in the private market or in other public housing units.

NORC at the University of Chicago, with funding and support from the John D. and Catherine T. MacArthur Foundation, is conducting the Resident Relocation Survey (RRS). The RRS collects data from current and former leaseholders of the CHA on their experiences with relocation. Between December 2003 and March 2004, NORC conducted a survey of the Phase III cohort, leaseholders who were beginning the relocation process in 2003. A sample of 400 of the 1,355 leaseholders was selected to participate in the survey; interviews were completed with 363 leaseholders, for a response rate of 90.8%. The findings from this baseline survey are reported elsewhere.¹

Between late 2004 and early 2005, NORC re-interviewed the Phase III leaseholders. All 400 leaseholders who were originally selected to be in the sample were eligible to participate. The purpose of this follow-up survey was to see how leaseholders were faring approximately one year after the relocation process had begun. Three hundred fifty-seven leaseholders participated in the follow-up survey. Of these, 95% (n=340) had also participated in the baseline. Five percent (n=17) of the leaseholders who participated were nonrespondents to the baseline survey; 23 leaseholders who participated in the baseline survey did not complete a follow-up interview.

The Phase III Follow-up survey was a face-to-face interview conducted at the residence of the leaseholder. The survey questionnaire collected information on: relocation status, experiences with relocation, adjustment to the new neighborhood, economic hardship, social services, children in the household, health, and satisfaction. Household rosters were completed to collect basic information on all the adults and children living in the household. In addition, the questionnaire collected basic demographic information about the leaseholder and the interviewer's observations about the leaseholder's housing unit. Many of the questions were consistent with questions asked in the Phase II Follow-up survey and the Phase III Baseline survey. New sections focus attention on how leaseholders are adjusting to their new neighborhoods.

This report presents the results of the Phase III Follow-up Survey. We organized the survey results into the following sections:

- The leaseholders and their households
- Housing choice and current housing status

¹ National Opinion Research Center. 2005. *Resident Relocation Survey: Phase III Baseline Methodology and Results*. Chicago, IL: National Opinion Research Center.

- Current housing unit and neighborhood
- Social exchange and neighborhood involvement
- Children in the household
- Economic Hardship
- Leaseholders' Health
- Social Services
- Finding an apartment
- Overall satisfaction with relocation

As part of the analyses, we compared the leaseholders by selected demographic characteristics and to other available survey findings both at the national level and for the city of Chicago. We also compared baseline and follow-up findings. The appendices to the report include a description of the survey methodology (Appendix A-1) and the data collection instrument (Appendix A-2). The questionnaire frequency tables, which show the overall distribution of responses to the survey questions, are presented in Appendix A-3. Also included are detailed demographic information on the leaseholders (Appendix A-4), detailed information on interview completion rate (Appendix A-5), and copies of selected survey materials (Appendices A-6 through A-9). All analyses in this report were weighted to adjust for differential selection probabilities (see Section 1.12 of Appendix A-1).

Section 1: The Leaseholders and Their Households

At the beginning of the interview, leaseholders provided information about the adults living in the household. The interviewer recorded this information in the Household Roster. As part of the survey questions on children, leaseholders enumerated all the children age 17 and under living in the household. In this section of the report, we present data on household composition, including total household size, the number and gender of adults living the household, employment status of the household adults, and the relationship of the leaseholder to other adults in the household. Most of the information presented in this section focuses on the adults in the household; further information about the children is presented in a later section.

The total number of residents in each household ranged from 1 to 13, with a mean of 3.2 household members (s.d.=2.1). The number of adults in the household ranged from 1 to 5; the number of children ranged from 0 to 9. Overall, 63% of households include children under the age of 18. Table 1 below shows the number of children in each household, broken down by the number of adults in the household.

Table 1. Household Size by Number of Adults and Children

	Number of Adults		
Number of Children	1	2	3 or more
0	26% (94)	10% (36)	1% (5)
1	9% (32)	6% (20)	2% (7)
2	10% (37)	4% (15)	1% (4)
3	10% (33)	4% (13)	<1% (3)
4 or more	9% (32)	5% (18)	2% (8)

Looking at household composition both by number of adults in the household and sex, we find that in over half of households a female leaseholder is the only adult resident (see Table 2). In 9% of households, a male leaseholder is the only adult resident. A total of 25% of households include a female leaseholder and one other adult resident. Four percent of households include a male leaseholder and one other adult resident.

Table 2. Sex of Leaseholder and Other Adult Residents

	N	%
Female leaseholder only	194	54
Female leaseholder, female other adult	36	10
Female leaseholder, male other adult	53	15
Female leaseholder, 2 or more other adults	21	6
Male leaseholder only	32	9
Male leaseholder, female other adult	11	3
Male leaseholder, male other adult	4	1
Male leaseholder, 2 or more other adults	6	2
Total	357	100

The household roster collected detailed information about the employment status of each adult in the household. For each unemployed adult, the leaseholder was asked to choose from a show card as many of the response options that applied to the unemployed adult's situation (for example, "looked but couldn't find job," "in job training," "in school," and so on).

As Table 3 below shows, in about two-thirds of households no adult was employed. Of the households in which at least one adult was employed, two-thirds had at least one adult employed full time; in the remaining households at least one adult had part-time employment.

Table 3. Employment Status of Leaseholder and Other Residents

	N	%
At least one person in household employed full time	82	23
At least one person in household employed part time	42	12
No one in household employed	233	65
Total	357	100

Table 4 provides further information about the household adults who were not employed at the time of the follow-up interview. As the table shows, the most frequently cited reason for not being employed was that the household member is disabled or has a health problem. Many adults had looked for a job but were unable to find one.

Table 4. Current Situation of Household Adults Who Are Not Employed

	N (Base N=380)	%
Looked but couldn't find job	99	26
Have difficulty getting transportation to where jobs are	13	3
I lack skills, training, or education that qualify me for jobs	22	6
I have a felony record that makes it difficult to find a job	6	2
In job training	4	1
Temporarily laid off	14	4
Retired	29	8
Disabled/have health problem, can't maintain job	140	37
Keeping house	8	2
In school	34	9
At home caring for child	26	7
Caring for someone with a health problem	8	2
Something else	8	2

Note: The leaseholder chose all options that applied to each household adult's unemployment situation.

Most leaseholders are the only adult living in the household (see Table 5). Of the households with more than one adult resident, most include only the leaseholder and his/her adult children or grandchildren. Five percent of households include the leaseholder and an adult partner. The remaining 7% of households are composed of other living arrangements, including other adult relatives, unrelated adults, and adult children.

Table 5. Household Composition by Relationship to Leaseholder

	N	%
Leaseholder only	227	65
Leaseholder and adult child(ren) and/or grandchild(ren) only	79	23
Leaseholder and adult partner	19	5
Leaseholder and adult partner and/or other adult relative and/or adult child	10	3
Leaseholder and other adult relative	10	3
Leaseholder and unrelated adult*	4	1
Total	349	100

Note: Relationship data missing on 8 leaseholders. *One household in this category includes both unrelated adult and adult child.

Section 2: Housing Choice and Current Housing Status

Eligible leaseholders were given three permanent relocation housing choices—to reside in a new or rehabilitated CHA public housing unit, to lease an apartment in the private rental market with a Housing Choice voucher (HCV), or to reside in unsubsidized housing. Leaseholders informed the CHA of their choice by completing a Housing Choice Survey early in the relocation process; leaseholders were allowed to change their permanent housing choice only once.

Table 6. Permanent Housing Choice

Q1.	N	%
New or Rehabilitated Public Housing (CHA)	213	60
Private Subsidized (Housing Choice voucher)	140	39
Unsubsidized	3	<1
Other	1	<1
Total	357	100

In the follow-up survey, leaseholders reported their permanent housing choice. As Table 6 above shows, the majority of the 357 leaseholders who provided information about their permanent housing choice chose to live permanently in public housing. Almost all of the remaining leaseholders chose to relocate permanently to subsidized private market apartments.

A comparison of leaseholders' self-reported permanent housing choice in the Phase III baseline and follow-up surveys reveals substantial differences in reported housing choice between the two surveys (see Table 7). For leaseholders who participated in both surveys, the table below shows what leaseholders indicated their permanent housing choice was in each survey. Most leaseholders reported no changes in their permanent housing choice between the two surveys. However, according to leaseholders' reports, over one-fourth of leaseholders changed their permanent housing choice since the baseline survey.

Table 7. Permanent Housing Choice in the Phase III Baseline and Follow-up Surveys

Baseline	Follow-up	N	%
CHA	CHA	150	46
HCV	HCV	87	26
CHA	HCV	43	13
HCV	CHA	49	15
Total		329	100

Since the majority of leaseholders chose to live in subsidized living arrangements, the remaining analyses in this report exclude the small number (n=4) of leaseholders who chose to relocate to unsubsidized or other housing. Therefore, our base sample size is 353

(unweighted). Differences from this sample size occur when analyses apply to only a subgroup of the sample or because of missing data or rounding.²

Leaseholders who chose to live permanently in new or rehabilitated CHA housing also indicated a temporary housing choice on their Housing Choice Survey. Of the 214 leaseholders who chose permanent CHA, 63% (n=134, Q2) chose a temporary CHA unit, while 37% (n=80) chose to live temporarily in private subsidized housing with a Housing Choice Voucher.

Leaseholders were asked where they were in the process of relocation in January of 2004 (Q3) and where they were in the process of relocation at the time of the follow-up interview, nearly a year later (Q4). Where leaseholders were currently in the relocation process determined the leaseholder's *relocation status*. Those leaseholders who were residing in the type of housing that was their permanent choice, whether this was a new or rehabilitated public housing unit or a private subsidized apartment, were considered to be *permanently relocated*. Leaseholders who were not yet in their permanent choice but had moved from their original CHA unit were considered to be *temporarily relocated*. At the time of the follow-up interview, some of these temporarily relocated leaseholders were in the process of getting a private HCV apartment. Other temporarily relocated leaseholders were in either a make-ready public housing unit or temporarily living in a HCV apartment, awaiting a new public housing unit. A third group of leaseholders includes those who had not moved from their original public housing units at all (called *original unit* in the table below). As Table 8 shows, at the time of the interview, more leaseholders whose permanent housing choice was HCV (89%, n=125 of 140) than leaseholders whose permanent choice was CHA (22%, n=48 of 214) were permanently relocated. Most leaseholders who chose to live permanently in HCV housing had already permanently relocated to a private apartment. Most who wished to live in a new or rehabilitated CHA unit were either temporarily relocated or still in their original units. Compared to the baseline interview, more leaseholders were permanently relocated at the time of the follow-up; the percentage of leaseholders permanently relocated increased from 31% to 49% between the two surveys. For leaseholders whose housing choice was CHA, the percentage of those who were permanently relocated rose from 5% to 22%; for those choosing HCV, the increase was from 71% to 89%.

Table 8. Relocation Status by Permanent Housing Choice

Q4.	Permanent CHA		Permanent HCV		Row Total	
	N	%	N	%	N	%
Permanently Relocated	48	22	125	89	173	49
Temporarily Relocated	108	51	8	6	116	33
Original Unit	58	27	7	5	65	18
Column Total	214	100	140	100	354	100

Leaseholders who are moving to a temporary or make-ready public housing unit have a right to inspect the unit before moving in. We asked leaseholders currently in temporary and make-ready units whether they saw their unit or another unit in the same development

² Appendix A-3 provides data on the number of missing observations for each questionnaire item.

prior to moving (Q10, Q22). Fifty-four percent of the leaseholders reported that they had seen a unit (n=51 of 94). When leaseholders reported not seeing a unit before moving in, it was most often because they were not given the opportunity (83%, n=29 of 35; Q11, Q23). Several leaseholders also indicated that they had not asked to see the unit or development (28%, n=12 of 43).

Section 3: Current Housing Unit and Neighborhood

This section of the questionnaire asked leaseholders about their current housing unit and their neighborhood. The findings presented here include (1) where the leaseholders were living at time of the interview, (2) leaseholders' knowledge of their new neighborhood before choosing to live there, (3) the condition of the leaseholders' current residence and their satisfaction with it, (4) leaseholders' observations of the characteristics of the neighborhood and their satisfaction with the neighborhood, (5) what leaseholders liked best about living outside of public housing and what problems they have experienced. Some questions applied to all leaseholders; when questions do not apply to everyone, the relevant subgroup is noted.

3.1 Leaseholders' Location at Time of Interview

At the time of the Phase III follow-up interview, close to 60% of the leaseholders who had moved were within five miles of their original location. Two thirds of the Phase III leaseholders did not move between the time of the baseline and first follow-up interviews and about a quarter of these had not left their original location. Most of these are leaseholders living in buildings being rehabilitated; leaseholders simply move to a temporary unit within the same building while their unit is being rehabbed. As Tables 9a and 9b show, 95% of the leaseholds interviewed were at or within 10 miles of their original location at the time of the follow-up interview. No leaseholder moved more than 25 miles away from their original location.

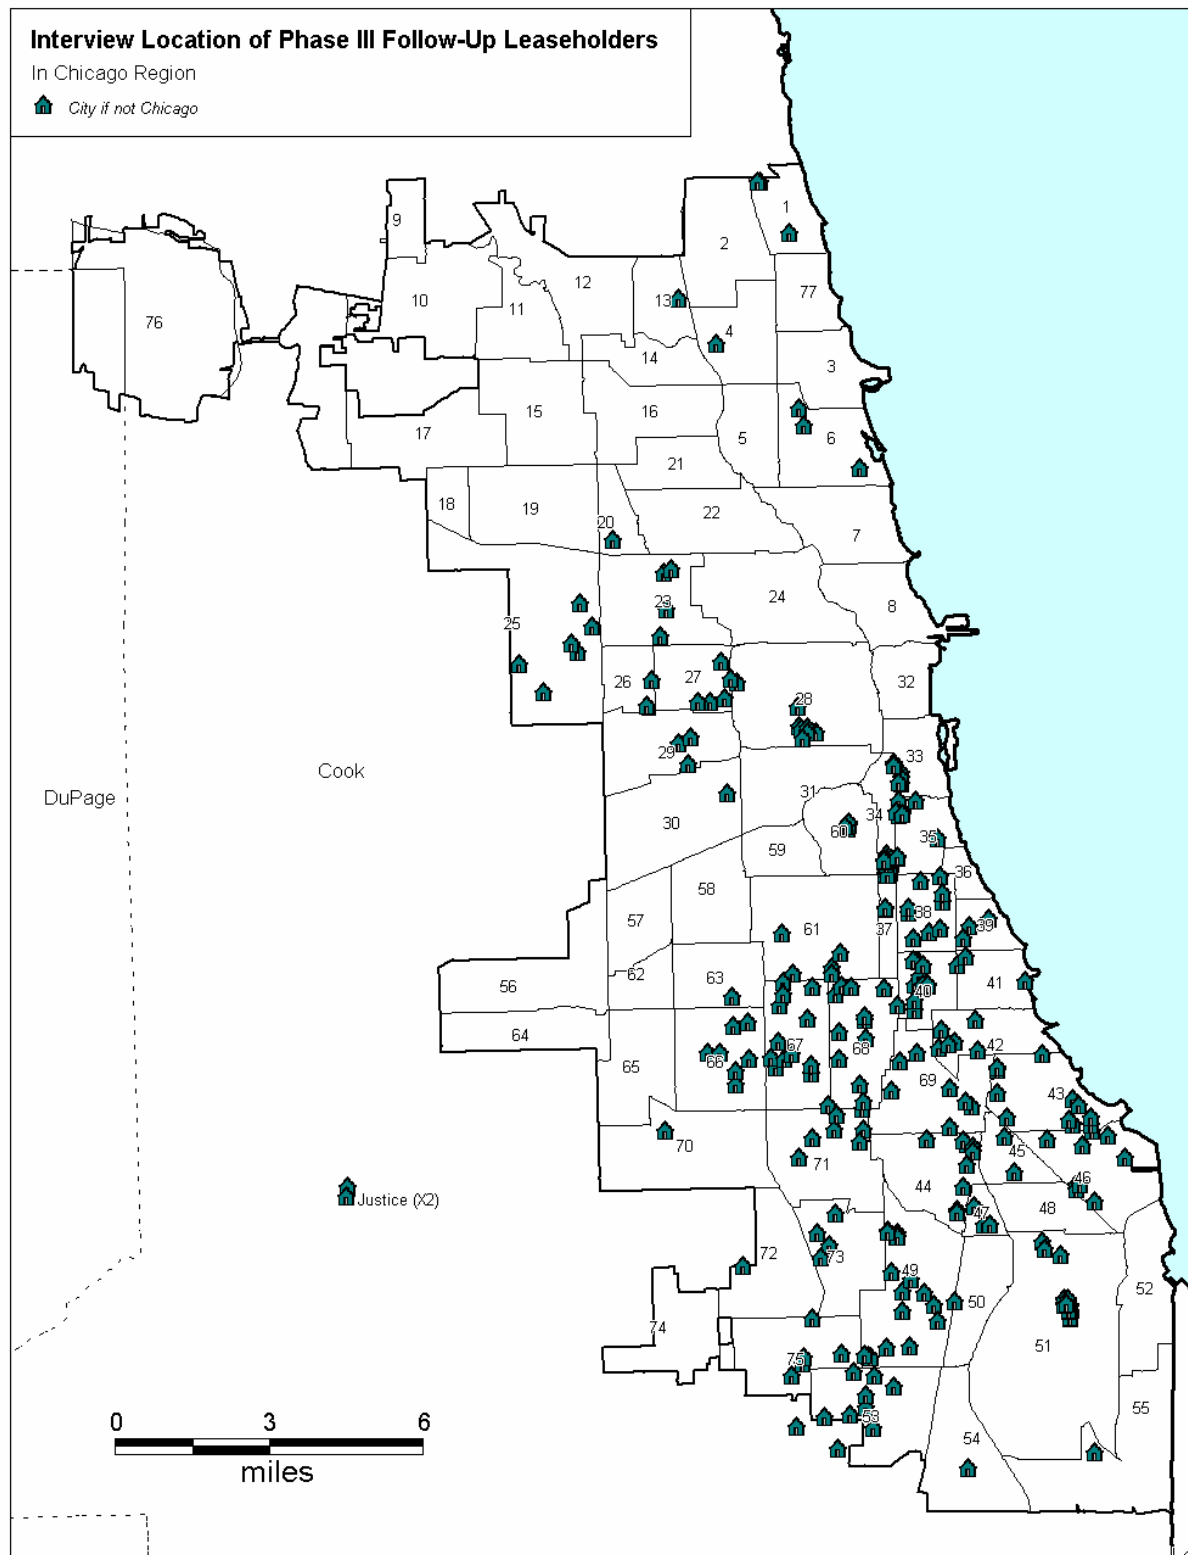

Table 9a. Distances from Phase III Baseline to Phase III Follow-up Locations (n=357)

Distance (miles)	Count (N=357)	Percentage
Zero	235	66%

The maps on the following pages depict both the city of Chicago and the metropolitan Chicago area; these maps depict where all 357 of the leaseholders were located at the time of the follow-up interview. Following the maps is Table 10, which lists the communities in which the CHA developments are located and the number of leaseholders living in those communities at the time of our baseline interview in 2004 and our follow-up interview in 2005.

3.2 Knowledge of Neighborhood Prior to Move

Leaseholders who moved from their original CHA unit, building and development (n=216, 61% of leaseholders) were asked a series of questions about how well-informed they felt they were about their new neighborhood prior to their move (Q78). Almost a quarter of these leaseholders (23%, n=50 of 215) reported knowing a lot about the neighborhood before moving there, while almost half (49%, n=106) indicated that they knew “some” or “a little.” Over a quarter (27%, n=58) said that they knew “nothing” about their neighborhood before they moved.

Leaseholders were also asked about their knowledge of five specific kinds of services (see Table 11). Although a majority of leaseholders (53%, n=115 of 215) reported knowing “a lot” or “some” about their new neighborhood prior to moving, relatively few leaseholders reported knowing much about the services in their neighborhood prior to their move. The exception was knowledge about public transportation. Fifty percent (n=108 of 214) of leaseholders reported knowing “a lot” about access to public transportation in their neighborhood before moving.

A majority of leaseholders reported knowing “nothing” about employment services, social services and childcare services. Almost one-half of leaseholders reported knowing “nothing” about health clinics; a much smaller percentage reported no knowledge of access to public transportation prior to moving. When asked if they wanted to know more about this neighborhood, 27% of leaseholders (Q80, n=58 of 215) indicated “yes.” In an open-ended question, leaseholders stated that they wanted to know more about characteristics of the neighborhood (concerning issues such as safety, cleanliness, problems with loitering), social services and local organizations (such as health services and CAPS), and resources and activities for children.

Table 11. Knowledge of Neighborhood Services

Q79. Before you moved, how much did you know about...	A lot		Some		A little		Nothing		Total	
	N	%	N	%	N	%	N	%	Base N	%
Employment service	19	9	29	14	31	15	134	63	213	100
Social service	13	6	32	15	35	16	131	62	211	100
Health clinics	35	17	36	17	37	17	106	50	214	100
Access to public transportation	108	50	33	15	33	15	41	19	214	100
Child care services	27	13	26	13	18	9	133	65	205	100

3.3 Condition of Current Unit and Satisfaction

All leaseholders who moved from their original unit (n=284, 80% of leaseholders) were asked about their current unit. Some leaseholders moved to another public housing unit in the same CHA building. Others moved to units in other CHA buildings and still others moved to private market apartments with Housing Choice vouchers.

As shown in Table 12, most leaseholders (82%, n=226 of 276) indicated that their unit was in excellent or good condition when they moved in and a small percentage rated the unit as being in poor condition when they moved in.

Table 12. Condition at Move-In

Q74. Overall, in what condition was your unit when you moved in?	N	%
Excellent condition	111	40
Good condition	114	41
Fair condition	42	15
Poor Condition	9	3
TOTAL	276	100

Leaseholders were asked about the availability and working condition of specific amenities in their unit when they moved in. A majority of leaseholders indicated that the amenities in Table 13 were both available and working in their unit with one exception. The amenity that was least available to leaseholders was “laundry facilities,” with fewer than half reporting that they had laundry facilities available and working in their unit or building.

Table 13. Amenities when Leaseholder Moved into Unit

Q75. Please tell me if each of the following were available and working in your unit when you moved in.	Available and Working		Available but not Working		Not Available		TOTAL	
	N	%	N	%	N	%	Base N	%
A cooking stove with an oven?	214	76	7	3	59	21	279	100
A refrigerator?	217	78	6	2	56	20	279	100
A kitchen sink?	268	96	10	4	1	<1	278	100
Adequate heat?	253	91	20	7	6	2	279	100
Laundry facilities in your building or unit?	124	45	22	8	132	47	278	100

Leaseholders who indicated that an amenity was either not working or not available when they moved in were then asked if that amenity was available and working now (see Table 14). A majority of these leaseholders indicated that the amenity was now available and working with the exception of laundry facilities. Most reported that they still did not have working laundry facilities in their building or unit.

Table 14. Amenities in Unit Now

Q76. Are they available and working now?	Base N	Yes %
A cooking stove with an oven?	63	92
A refrigerator?	61	97
A kitchen sink?	10	54
Adequate heat?	21	58
Laundry facilities in your building or unit?	141	19

When asked whether their current apartment was better, worse, or about the same as their last apartment, nearly two-thirds of leaseholders reported that their current apartment was better. Younger leaseholders more often than older leaseholders reported being in better apartments (74%, n=103 vs. 56%, n=77) (t=3.151, p=.002).

All leaseholders were asked how they were being treated by their new Landlord or Property Manager (Q71). Most leaseholders (83%, n=259 of 311) reported being treated the same as other tenants.

As Table 15 below shows, most leaseholders reported their building was “well” or “very well” maintained by their current landlord or property manager (Q70). However, of the small number of leaseholders who were in temporary CHA units, more than half (58%, n=7 of 12) stated that their building was poorly or very poorly maintained.

Table 15. Building Maintenance

Q70. How well does your landlord or property manager maintain the place where you live? Would you say the building is...	N	%
Very well maintained	134	38
Well maintained	152	43
Poorly maintained	44	12
Very poorly maintained	22	6
TOTAL	353	100

3.4 Characteristics of the Neighborhood

Leaseholders who had moved from their original CHA unit, building and development (n=216, 61% of leaseholders) were asked about their new neighborhood. The survey asked about how their current neighborhood compared to their former one (if they had moved), amenities, neighborhood problems and transportation.

When asked to compare their current neighborhood with their former neighborhood, most of the leaseholders (63%, n=135 of 214) reported that their current neighborhood was better than their former neighborhood (Q109); while about a quarter (26%, n=55 of 214) stated their neighborhoods were about the same. A smaller number (11%, n=23) stated that their neighborhoods were worse. Of those leaseholders in temporary CHA units, however, no one thought their new neighborhood was better than their former neighborhood and most (75%, n=3 or 4) thought it was worse.

Leaseholders were asked about what amenities were available in their neighborhood and, if the amenity was available, whether they or members of their household used those amenities (Q82; see Table 16). All the amenities asked about were available in most of the leaseholders' neighborhoods. The amenity most frequently reported as being in the neighborhood was “a currency exchange.” The amenity most frequently reported as being used was “a grocery store” (90%, n=257 of 286), followed by “a currency exchange” (83%, n=275 of 332). Banks were used the least frequently by the leaseholders.

Table 16. Amenities in Neighborhood

Q82. I am interested in what amenities are available in this neighborhood and whether or not you or other members of your household use them.			Q83. [IF YES:] Do you use it?	
	Base N	% Yes	Base N	% Yes
Is there a bank in this neighborhood?	320	74	238	23
Is there a currency exchange in this neighborhood?	351	95	332	83
Is there a grocery store in this neighborhood?	352	81	286	90
Is there a library in this neighborhood?	307	74	227	71
Is there a place to go for health care in this neighborhood?	300	80	240	58
Is there a park or green space in this neighborhood?	334	86	287	73

We asked leaseholders about the presence of six characteristics that research has shown are associated with neighborhood disorganization and violence (Q108; see Table 17). These questions were taken from the Community Survey of the Project on Human Development in Chicago Neighborhoods (which will be referred to as the PHDCN-CS)³. The PHDCN is a longitudinal study aimed at understanding the development of children growing up in urban neighborhoods, and understanding what leads to juvenile delinquency, adult criminal behavior, drug abuse and violence. The Community Survey asks Chicago residents from 343 neighborhood clusters throughout the city to assess their neighborhoods on a variety of dimensions, including the dynamic structure of the community, political organization, cultural values, informal social control, formal social control, and social cohesion.

The neighborhood characteristic most frequently cited as a “big” problem or “somewhat of a problem” by leaseholders was selling or using drugs (61%, n=213 of 346). When looking at reports of big problems – selling or using drugs was the most frequently cited problem, followed by litter, drinking in public, and teens causing a disturbance.

³ Earls, Felton. Project on Human Development in Chicago Neighborhoods: Community Survey, 1994-1995 [computer file]. ICPSR version. Boston, MA: Harvard Medical School [producer], 1997. Ann Arbor, MI: Inter-university Consortium for Political and Social Research [distributor], 1999. For further information about the Project on Human Development in Chicago Neighborhoods, see <http://www.hms.harvard.edu/chase/projects/chicago/index.html>.

Table 17. Problems in Neighborhood

Q108. How much of a problem would you say each of the following is in this neighborhood?	Big Problem %	Some-what of a problem %	No problem %	Base N	Total %
Drinking in public	22	24	55	349	100
Selling or using drugs	35	26	39	346	100
Teenagers causing a disturbance	21	26	53	349	100
What about litter?	24	27	50	354	100
What about graffiti?	10	18	73	354	100
What about vacant housing?	13	12	75	351	100

A comparison of the neighborhood problems CHA leaseholders reported with problems reported by residents of Chicago communities in the PHDCN-CS shows that the leaseholders' new neighborhoods compare relatively favorably. The leaseholders report drugs to be a problem more often as compared to the PHDCN-CS sample; however, teenagers causing a disturbance, litter, graffiti and vacant housing were all less frequent problems for the leaseholders than for the PHDCN-CS sample. Since the group of Phase III leaseholders includes those who had moved at the time of the follow-up and those who still resided in their original units, buildings, or developments, we examined reports of neighborhood problems by whether the leaseholder had moved. Those leaseholders who had left their original units, buildings, and developments are referred to as *movers*; those who remained in their original units, buildings, or developments are *non-movers*. This analysis shows that movers reported experiencing neighborhood problems *less* often as compared to the PHDCN-CS sample. In contrast, leaseholders who were non-movers reported that drinking, drugs, and teens to be problems *more* often as compared to the PHDCN-CS communities. As Table 18 below shows, movers were experiencing fewer neighborhood problems than non-movers. For all neighborhood problems asked about except litter, significantly more leaseholders who had moved reported these issues to be "no problem" as compared to leaseholders who had not. Overall, leaseholder reported an average of 2.5 problems in their neighborhood (s.d.=2.1; n=353). Movers reported fewer problems on average (mean= 2.1, s.d.=2.0, n=216) compared to non-movers (mean=3.3, s.d.=2.2, n=135; t=5.3, df=349, p<.05).

Table 18. Problems in Neighborhood

Q108. How much of a problem would you say each of the following is in this neighborhood?	RRS Big/Somewhat of a problem (Base n)			PHDCN Big/Somewhat of a problem %
	All Leaseholders % (Base N)	Moved from original unit/bldg/dev % (Base N)	Not moved % (Base N)	
Drinking in public	46 (349)	37* + (214)	58* (136)	46
Selling or using drugs	61* (346)	54 + (215)	74* (133)	53
Teenagers causing a disturbance	47* (349)	36* + (216)	64* (135)	53
What about litter?	51* (354)	50* (219)	51 (136)	58
What about graffiti?	28* (354)	17* + (219)	44 (136)	52
What about vacant housing?	25* (351)	17* + (217)	39 (135)	32

Note: The symbol * indicates a significant difference when RRS data (either overall or by move status) are compared to the PHDCN Community Survey. The symbol + in the RRS Moved column indicates a significant difference between RRS leaseholders who moved and those who did not.

Leaseholders were asked about their ability to travel to places they may need to go. Leaseholders most frequently reported difficulty going to shopping areas (84%, n=67 of 80), followed by difficulty traveling to friends or relatives (36%, n=29 of 80), and then to a church or place of worship (32%, n=26 of 80).

Table 19. Transportation Difficulties to Specific Places

Q84b. Where do you have difficulty going? Going to...	Base N	Yes %
Work	80	21
School	80	13
Childcare	80	6
Shopping areas	80	84
Church or place of worship	80	32
Friends or relatives	80	36
Some other place, (specify)	80	4

Leaseholders were then asked why it was difficult to get to the places asked about (see Table 20). The most commonly cited reason was that they did not have access to

transportation (43%, n=34 of 79). The second and third most common reasons were because “it is too far away” (39%, n=31) and “transportation is expensive” (37%, n=29).

Table 20. Difficulty with Transportation

Q84c. Why is it difficult to get there? Would you say...	Base N	Yes %
It’s too far away	79	39
Don’t have access to transportation	79	43
Transportation is unreliable	79	27
Transportation is expensive	79	37
Some other reason, please specify	79	4

3.5 Living Outside of Public Housing

Leaseholders living in HCV housing (n=192, 54% of leaseholders) were asked to select the main thing they liked the best about living outside public housing from a list (Q112). As Table 21 shows, the most commonly endorsed item was “safer neighborhood” which was selected by 40% (n=76) of leaseholders. The second most frequently selected item was “nicer apartment” (24%, n=46).

Table 21. Main Thing Leaseholder Liked Best about Living Outside of Public Housing

Q112. ...the main thing you like best about living outside of public housing?	% Yes Base N=191
Closer to family and friends	6
Children can go to a better school	5
Better childcare	<1
Better access to jobs	2
Good transportation	4
Safer neighborhood	40
Better access to social services	<1
Shopping	4
Nicer apartment	24
Something else (SPECIFY)	8
Do not like anything	6

Leaseholders were only allowed to select one item from the list. Eight percent of younger leaseholders (n=10) selected “children can go to a better school”, while none of the older leaseholders selected this item. Eighty-eight percent of leaseholders in the younger age group (n=142 of 161) have children as opposed to 41% of leaseholders in the older age group (n=77 of 190).

Leaseholders were asked about any problems that they may have experienced living outside of public housing (see Table 22). They were asked to choose all responses that applied from a list read aloud and presented on a show card. Over half of the leaseholders

(59%, n=111 of 188, Q114) stated they did not experience problems living outside of public housing. Of those who reported experiencing problems, the most frequent problems indicated were: financial hardships (17%, n=32); not knowing area/unfamiliar/unease (9%, n=18); and safety/violence in neighborhood (10%, n=18).

Table 22. Problems Living Outside of Public Housing

Q114. You may have had problems living outside of public housing.... any problems you may have experienced?	% Yes Base N=188
Leaving friends and family	7
Children going to a new school	7
Children changing or losing childcare	3
Being far away from my job	3
Being far from transportation	3

Health or personal problems	4
Not having access to services you need	7
Not knowing area/unfamiliar/unease	9
Using LINK card	0
Accessing TANF office	1
Loss of resource for emergency cash assistance	1
Too far from old neighborhood	4
Some other problem (SPECIFY)	6
No problems	59

Section 4: Social Exchange and Neighborhood Involvement

The questionnaire included a series of questions on the leaseholders' involvement with their neighborhoods. We asked about (1) activities and organizations in which they were involved, (2) actions they had taken to improve their communities, (3) familiarity with neighbors, and (4) giving help to or receiving help from neighbors, and (5) whether leaseholders who moved still return to their former neighborhood and why they return.

4.1 Social Activities and Organizations

All leaseholders were asked about the social activities and organizations in which they or other members of their household participate. Leaseholders who indicated that they or a household member participated in an activity or in an organization were asked if it was in this neighborhood (see Table 23). The most commonly endorsed activity was belonging to “a church, mosque, synagogue or any other religious organization” (51%, n=180 of 354) followed by “a recreation center” (19%, n= 67 of 353), and then by “a block group, tenant association, or community council” (16%, n=56 of 351). A majority of leaseholders who indicated that they or a household member participated in an organization also indicated that it was in the neighborhood with one exception. Only 37% of leaseholders who indicated “a religious organization” (n=67 of 180) reported that it was in their neighborhood.

Table 23. Social Activities and Organizations: Comparison to PHDCN

Q85. I am interested in the social activities and organizations that people join. For each one that I name please tell me if you or other members of your household participate in any of these activities. Do you or anyone in your household belong to...					Q86. [IF YES:] Is this organization in this neighborhood?	
	RRS All % Yes (Base N)	RRS Moved % Yes (Base N)	RRS Not Moved % Yes (Base N)	PHDCN % Yes	RRS All % Yes (Base N)	PHDCN % Yes
a church, mosque, synagogue or any other religious organization?	51* (354)	46* + (216)	58 (136)	59	37* (180)	57
any kind of neighborhood watch program?	14 (352)	8 + (214)	23* (136)	11	84 (49)	83
a block group, tenant association, or community council?	16 (351)	10 + (214)	25* (135)	14	93 (56)	95
a Ward Group, or other local political organization?	6* (349)	5 (214)	9* (133)	3	77 (22)	--
A recreation center?	19 (353)	12+ (215)	29 (136)	--	88 (67)	--
A Parent/Teacher organization?	11 (351)	11 (216)	12 (133)	--	75 (40)	--

Note: The symbol + in the RRS Moved column indicates a significant difference between RRS leaseholders who moved and those who did not. The symbol * indicates a significant difference when RRS data (either overall or by move status) are compared to the PHDCN Community Survey.

The data from the RRS leaseholders were compared to data from the PHDCN-CS. Table 23 above shows the findings both overall and by whether the leaseholder had moved. Overall, compared to PHDCN-CS communities, somewhat fewer of the Phase III leaseholders and their household members belonged to a church or other religious organization but somewhat more belonged to a political organization. Unlike the PHDCN-CS findings, more leaseholders belonged to a church or religious organization outside of their current neighborhood. When viewed by whether the leaseholder moved,

a different pattern emerges. Leaseholders who moved were less likely to belong to a church as compared to the PHDCN-CS sample. Leaseholders who had not moved were more likely to belong to a neighborhood watch, block group, or a local political organization as compared to the PHDCN-CS sample.

When comparing movers and non-movers, those who had not moved reported being involved with a religious organization, neighborhood watch problem, block group, or a recreation center significantly more often than those who had moved. Leaseholders who had moved were asked whether they were involved in each type of activity or organization before they moved. These leaseholders appear to have been involved in these activities before they moved and to have decreased this involvement after moving. As these leaseholders become more settled in their new neighborhoods, it will be of interest to investigate changes in their neighborhood involvement.

4.2 Involvement in Community Improvement

Leaseholders were asked about things they might have done to take care of a local problem, or to make the neighborhood a better place to live (see Table 24). The action leaseholders most frequently reported was “attending a meeting of a neighborhood group” (22%, n=78 of 348), followed by “getting together with neighbors” (20%, n=70 of 349), and then by speaking with a local politician or official” (12%, n=43 of 349).

Leaseholders were also asked if they were involved in any of these activities before they moved to this neighborhood. They again most frequently endorsed “attend a meeting of a neighborhood group” (34%, n=71 of 210); however, a close second was “get together with neighbors” (33%, n=70 of 211).

Table 24. Involvement in Activities to Take Care of a Local Problem

Q 87. Sometimes people in a neighborhood do things to take care of a local problem or to make the neighborhood a better place to live. Talked/talk to a person or group causing a problem in this neighborhood?	8* (349)	19	25* (211)
Attended/attend a meeting of a block or neighborhood group about a problem or improvement in your old neighborhood?	22* (348)	30	34 (210)
Talked/talk to a local religious leader or minister to help with a problem or improvement in your old neighborhood?	8* (348)	15	15 (211)
Gotten/get together with neighbors to do something about a problem or improvement in your old neighborhood?	20* (349)	28	33 (211)

The symbol * indicates a significant difference when RRS data (either overall or by move status) are compared to the PHDCN Community Survey.

As Table 25 above shows, compared to the PHDCN-CS, the leaseholders were involved in fewer activities in their new neighborhoods to take care of local problems and make the neighborhood a better place to live. Again, this is likely due to the short amount of time that they have lived in their new neighborhoods. In their old neighborhoods, more leaseholders had engaged in the neighborhood improvement activities asked about (Q88). For three of the activities, there was no difference in

participation between the leaseholders and the PHDCN-CS sample. Leaseholders reported talking to a group causing a problem in their old neighborhood more often than residents of other communities; they reported talking to politicians and elected officials less often. As the leaseholders spend more time in their new neighborhoods, we may see an increase in their reports of involvement in neighborhood activities.

4.3 Familiarity with Neighbors

All leaseholders were asked how many adults they knew by sight in this neighborhood and then how many children they knew by sight in this neighborhood. As Table 26 shows, only six percent of respondents reported recognizing no adults (n=20 of 353) and sixteen percent reported knowing no children (n=56 of 354). Twenty-three percent of respondents indicated that they would recognize “a great many adults” (n=81 of 353) and twenty-eight percent indicated that they would recognize “a great many children” (n=98 of 354).

Table 26. Number of Adults and Children Leaseholders’ Recognize

Q89/Q90. How many adults/children do you recognize by sight in this neighborhood – would you say you recognize...	Adults Base N=353 %	Children Base N=354 %
No adults/children	6	16
A few adults/children	50	38
Many adults/children	21	18
A great many adults/children	23	28
TOTAL	100	100

When comparing the overall sample of RRS leaseholders to the PHDCN-CS sample, we do not see striking differences in the percentage of those recognizing “many” or “a great many” adults and children in the neighborhood (see Table 27). However, when we consider the leaseholders who moved separately from those who had not, it is clear that the non-movers are quite different from the PHDCN-CS sample. Significantly more of the non-movers indicated that they recognize many or a great many adults and children in their neighborhoods, as compared to the PHDCN-CS. In contrast, significantly fewer of the movers said that they recognized many or a great many adults as compared to the PHDCN-CS sample. When compared to movers, non-movers said they recognized many or a great many adults and children significantly more often. These findings show that the leaseholders were very familiar with the people in the neighborhoods where they lived before relocating. At the time of the follow-up survey, up to a year after relocating, leaseholders who moved were less familiar with their neighbors than before they moved.

Table 27. Number of Adults/Children Leaseholders Recognize

Q89-Q90. Leaseholder recognizes many/a great many	RRS Total % (Base N)	RRS Moved % (Base N)	RRS Not Moved % (Base N)	PHDCN %
Adults	44 (353)	27* + (215)	72* (136)	48
Children	46 (354)	33 + (216)	67* (136)	37

Note: The symbol + in the RRS Moved column indicates a significant difference between RRS leaseholders who moved and those who did not. The symbol * indicates a significant difference when RRS data (either overall or by move status) are compared to the PHDCN Community Survey.

The leaseholders were also asked to judge how hard it would be for them to pick out people who are outsiders or who do not live in their area (see Table 28). Overall, 60% of all leaseholders indicated it would be very easy or somewhat easy to pick out outsiders; this percentage is about the same as for the PHDCN-CS sample. If leaseholders who moved are considered separately from those who had not moved, however, differences emerge. As compared to the PHDCN-CS sample, non-movers reported more often that it was “very easy” or “somewhat easy” to pick out outsiders. However, leaseholders who moved were less likely than the PHDCN-CS sample to indicate that they can pick out strangers easily. When comparing movers and non-movers, those who had moved reported significantly greater difficulty picking out outsiders.

Table 28. How Easy is it to Pick out Outsiders

Q91.	RRS Total % (Base N=346)	RRS Moved % (Base N=210)	RRS Not Moved % (Base N=134)	PHDCN %
Very easy/somewhat easy	60	46* +	84*	57

Note: The symbol + in the RRS Moved column indicates a significant difference between RRS leaseholders who moved and those who did not. The symbol * indicates a significant difference when RRS data (either overall or by move status) are compared to the PHDCN Community Survey.

All leaseholders were then asked a series of questions concerning the number of relatives or friends who lived in their neighborhood and outside their neighborhood. Their reports were compared to data from the PHDCN-CS sample. When asked specifically about friends and family members who live in their neighborhood, a majority of leaseholders indicated that none of their relatives lived in the neighborhood (56%, n=198 of 352; see Table 29). Thirty-eight percent reported that none of their friends lived in the neighborhood (n=130 of 346). A majority of leaseholders indicated that they had 10 or more relatives outside of this neighborhood (70%; n=245 of 352) and a majority also indicated that they had 10 or more friends living outside of this neighborhood (64%; n=227 of 353). These findings indicate that for many leaseholders, their network of family and friends is primarily outside of their current neighborhood.

Table 29. Relatives and Friends who Live in this Neighborhood

Q92. Not counting those who live with you...	None	1-2	3-5	6-9	10+	Base N	Total %
	%	%	%	%	%		
...how many of your relatives or in-laws live in this neighborhood? Would you say...							
...how many of your relatives or in-laws live outside this neighborhood?	56	24	12	4	4	352	100
...how many of your friends live in this neighborhood?	1	8	12	10	70	352	100
...how many of your friends live outside of this neighborhood?	38	28	16	5	12	346	100
...how many of your friends live outside of this neighborhood?	6	11	10	8	64	353	100

To compare the findings from the leaseholders to the PHDCN-CS sample, response categories were collapsed and the samples compared on the percentage of respondents stating that they had three or more relatives or friends in or outside of the neighborhood. When compared to the PHDCN-CS sample, the leaseholders appear less likely to have three or more friends in the neighborhood (see Table 30). However, whether the leaseholder had moved affected reports of having friends in the neighborhood; those who had not moved were more likely to have friends in the neighborhood compared to the PHDCN-CS sample. Movers were less likely to have both friends and relatives in the neighborhood as compared to the PHDCN-CS sample. Movers differed from non-movers in the number of friends they had in the neighborhood; movers seemed to have fewer friends in the neighborhood.

Table 30. Percentage Having 3 or More Friends or Relatives Inside and Outside Neighborhood

Q92.	RRS Total % (Base N)	RRS Moved % (Base)	RRS Not Moved % (Base N)	PHDCN %
3 or more relatives in neighborhood	20 (352)	17* (214)	24 (136)	23
3 or more relatives outside neighborhood	92 (352)	91 (216)	92 (134)	--
3 or more friends in neighborhood	34* (346)	23* + (209)	52* (136)	66
3 or more friends outside neighborhood	83 (353)	86 (215)	79 (136)	83

Note: The symbol + in the RRS Moved column indicates a significant difference between RRS leaseholders who moved and those who did not. The symbol * indicates a significant difference when RRS data (either overall or by move status) are compared to the PHDCN Community Survey.

4.4 Giving and Receiving Help

All leaseholders were asked about the help that they gave to others in their neighborhood as well as the help that they received from others in their neighborhood. For most types of help, leaseholders reported that they had neither given nor received that type of help since moving to this neighborhood.

For two items, however, a majority of leaseholders responded that they had given or received that type of help since moving to this neighborhood (see Table 31). Seventy-five percent of leaseholders indicated that they had either dropped in for a casual visit or that someone had dropped in on them for a casual visit (n=265 of 354), with 14% (n=48) reporting that this happened almost everyday. A majority of respondents (63%; n=224 of 354) also indicated that they had given or gotten a ride from someone with 8% (n=30) reporting that this happened almost everyday.

Table 31. Giving and Receiving Help in this Neighborhood

Q93-107. (In the last 12 months/Since the time you moved to this neighborhood), how often have you...	Never %	Once/ A few times %	Once a month or week/ Almost every day %	Base N
Watched someone's child or had someone watch your child or children?	66	18	16	354
Loaned or borrowed things?	70	22	9	354
Helped or been helped with a chore or repairs?	54	34	12	353
Dropped in for a casual visit or has someone dropped in on you for a casual visit?	25	47	28	354
Helped or been helped in an emergency?	61	34	5	352
Given or gotten a ride from someone?	37	40	23	354
Gotten or received help with anything else?	87	10	4	353
Asked or given advice about this neighborhood you live in?	61	30	9	354
Asked or given advice about activities and resources for kids?	69	23	8	354
Asked or given advice about rules in this neighborhood, such as rules about hosting parties, playing music, your rights as a renter, or the neighborhood curfew laws?	78	17	5	353
Asked or given advice about local amenities in your neighborhood, such as the bank, grocery store, library, places of worship, parks and other recreational areas?	74	20	5	352
Asked or given advice about where to find local services, such as health care services, employment services or financial services?	73	23	4	354
Asked or given advice about neighborhood safety issues?	72	20	8	354
Asked or given advice about this apartment you live in?	63	29	8	354
Asked or given advice about anything else?	91	6	3	351

Leaseholders who reported that they had given or received a type of help were then asked to whom they gave help or from whom they received help. The options were: family living in this neighborhood, family living outside this neighborhood, old friends living in this neighborhood, old friends living outside this neighborhood, new friends living in this neighborhood, or someone else. Respondents were told to select all of the

categories that applied. The most frequently selected category for each type of help is shaded in gray in Table 32. For seven of the items, “family living outside this neighborhood” was the most commonly endorsed category. “Old friends living in this neighborhood” was the most commonly selected category for five items.

4.5 Returning to Original Neighborhood

Leaseholders who had moved from their original unit, building, and development (n=216, 61% of leaseholders) were asked how often they went back to the neighborhood where their original CHA unit was. Almost half responded that they never went back (46%, n=97 of 140). Eight percent indicated that they went back every day (n=16); see Table 33.

Table 33. How Often Leaseholders Return to Original Neighborhood

Q110. How often do you go back to the neighborhood where your original CHA unit was? Would you say...	% Base N=214
Everyday	8
At least once a week	10
At least once a month	24
At least once a year	13
Never	46
TOTAL	100

Leaseholders who indicated that they did return to their original neighborhood were then asked why they went there (see Table 34). The most frequently indicated reason was “to see friends and family” which was selected by a large majority of the respondents (74%, n=84 of 114).

Table 34. Why Leaseholders Return to Original Neighborhood

Q111. Which of the following things do you go there for? Do you go there...	% Base N=114
To see friends and family	74
To go to church or any other religious organization	10
To shop	12
For support services	4
To take kids to school	16
To have someone watch your kids	1
Some other reason (Specify)	10

Section 5: Children in the Household

As in the baseline survey, the follow-up survey asked questions about children under the age of 18. We completed a roster of children in the household, with information on the ages and relationships between the children and leaseholder. The survey questions asked about (1) the leaseholder's satisfaction with the focal child's school, (2) the focal child's activities, (3) health, and (4) child care. The follow-up survey included some more detailed questions on these issues than were in the baseline survey.

If children under the age of 18 were in the household, the leaseholder was asked to give the first names or initials of each child in the household, and the child's age, relationship to the leaseholder, and the person in the household who is primarily responsible for the child. The interviewer checked whether the focal child from the baseline survey still resided in the household. If that focal child was still in the household, he or she was selected again as the focal child for the follow-up survey. Otherwise, a new focal child was selected at random using a Kish sampling table.

Among the findings from the baseline survey were that about two-thirds of households had children. Many children had to transfer schools because of relocation; a majority of leaseholders were more satisfied with the new school than their child's previous school. In general, relocation was a positive experience for the children, offering opportunities for positive experiences and to meet new friends. The baseline survey indicated no substantial differences at that point in how relocation affected children who move away from public housing and those who stay. In the follow-up survey as well, it appears that about a year after the relocation process began, no substantial differences have emerged among those who left public housing and those who stayed.

At the time of the follow-up survey, there were 221 households (63%, $n=221$ of 354) with children under the age of 18 (Q123). The number of children in these households ranged from one to nine, with an average of 2.8 children. The mean age of the selected focal children was 10 years. Of the 221 households with children, 28% ($n=62$) were in CHA housing and 70% ($n=155$) were in HCV housing (2%, $n=4$, were in unsubsidized or other housing).

In the majority of households, the child who was the focus of the questions on children at the baseline interview was still in the household at the time of the follow-up. In 84% of households ($n=192$ of 221), the leaseholder was interviewed about the same focal child as in both surveys. For 7% (17 of 221) one or more children had joined the household since the baseline interview and a focal child was selected for the first time. In 5% of households interviewed in the follow-up ($n=12$ of 221), the focal child from the baseline interview was no longer in the household and a new focal child was selected. For 8 of the 133 households with no children at the follow-up, a child had been present at the baseline but had left the household by the time of the follow-up interview.

As Table 35 below shows, in about three-quarters of households, the focal child was the son or daughter of the leaseholder. In most of the remaining households (22%, 48 of 216), the leaseholder was the focal child's grandparent.

Table 35. Relationship of Leaseholder to the Focal Child

Relationship	% Base N=216
Son or Daughter	74
Brother or Sister	0
Grandchild	22
Niece or Nephew	2
Other Relative	1
Foster Child	1
Other Non-relative	<1
Total	100%

Many households (28%, n=98 of 354) included extended families, in which people other than a single parent and his/her minor children or spouses/partners and their minor children lived in the household. In 12% of households (43 of 354 households), a grandparent was the primary caregiver for at least one child in the household.

5.1 Schools

We asked leaseholders to report whether the focal child was in school. Most of the focal children (90%, n=199 of 221; Q124) were enrolled in school. Of those children who were not enrolled, most were too young to attend school (77%, n=17 of 22). Of the remaining children not in school, all of whom were older teenagers, one was in detention, another was in Job Core, and a third was at home with her baby.

Leaseholders were asked how satisfied they were with the child's school. About 40% of the children were enrolled in a new school as a result of relocation (Q136). For both children who transferred to new schools and those who remained at the schools they attended before relocation, we asked leaseholders how satisfied they were with their current school (Q128). Most leaseholders were satisfied with their children's school; about half of leaseholders indicated that they were very satisfied with the child's current school (see Table 36).

Table 36. Satisfaction with Child's School

Q128. How Satisfied Are You With Current School?	% Base N=195
Very Satisfied	52
Satisfied	32
Dissatisfied	14
Very Dissatisfied	2
Total	100

Leaseholders were asked about what they both liked and disliked about the child's current school. Leaseholders who were either very satisfied or satisfied with their children's schools indicated a number of reasons for their satisfaction. When asked if there was anything they did not like, many were not able to name anything that dissatisfied them. The open-ended answers from these questions were coded; percentages of the coded responses are presented in Table 37 below.

Table 37. What Leaseholders Who Were Satisfied With School Liked and Disliked About the School

Q129. Satisfied With School—Reasons Why	% Base N=162
Good academic program/small class size	36
Good teachers/principal	36
Safer school/neighborhood	4
School close to home	11

School far from home	7
Not enough activities/resources/supplies	1
Disciplinary procedures not good	3
Poor communication	<1
Did not like school building/facilities	1
Other reasons/no reason specified	4
Nothing R dislikes	75

Similarly, leaseholders who were either dissatisfied or very dissatisfied with their children's schools indicated a number of reasons for their dissatisfaction. When asked if there was anything they did like, many were able to name something about the school that they did like. Percentages of the coded responses to these open-ended questions appear in Table 38 below.

Table 38. What Leaseholders Who Were Dissatisfied With School Disliked and Liked About the School

Q131. Dissatisfied With School—Reasons Why	% Base N=31
Poor academic program or teaching	26
Teachers not good	23
School/neighborhood not safe	23
School far from home	6
Not enough activities/resources/supplies	13

Safer school/neighborhood	10
School close to home	17
Activities/resources for children	10
Good discipline and control	3
Good communication	7
Liked school building/facilities	7
Other reasons	17
Nothing R likes	30

Of the 40% of the focal children (n=61 of 154; Q136) who had transferred schools because of relocation, most (92%, n=139 of 150) were in HCV housing. As in the baseline, the primary reason for transferring schools among children in the follow-up, was that the new school was closer to their new home (81%, n=50 of 61; Q137).

Since attending a new school is a significant change in children's lives, we asked leaseholders whether they felt adequately informed, before deciding where to relocate, about the schools their children might attend (Q138). Just over one quarter of parents indicated that they did not have enough information about the schools their child might attend (28%, n=17 of 61). When asked about the type of information they wanted about

the new school, more information about the academic program was the most commonly cited need (47%, n=8 of 17). A number of leaseholders wanted to know the location of the school (35%, n=6 of 17). Despite a lack of information about the new school, just over half of leaseholders said they were more satisfied with the new school than the school their child attended previously (51%, n=30 of 59; Q141, see Table 39).

An issue noted in the baseline survey was that many leaseholders felt that they did not have enough information about the new schools their children might attend. Overall, 40% of leaseholders said at the time of the baseline interview that they had enough information about schools. In contrast, many more leaseholders stated in the follow-up survey, (72%, n=44 of 61), that they had enough information. This finding suggests that there have been improvements in the level of information leaseholders obtained about schools before deciding to relocate.

Table 39. Satisfaction with New School

Q141. Compared to Previous School, How Satisfied with Current School	% Base N=59
More Satisfied	51
As Satisfied	24
Less Satisfied	25
Total	100

Those leaseholders who were more satisfied with their child's new school cited several reasons for their satisfaction (Q142; see Table 40). The most frequently cited reasons were that the academic program or class sizes were good and that the teachers or principal were good. Among the leaseholders who were less satisfied with the new school, the reasons cited included the lack of activities or resources for the children, poor academic program, poor disciplinary procedures, and distance from the school (Q143; see Table 41).

Table 40. Reasons Why More Satisfied With Current School

Poor communication	7
Academic program not good	20
Did not like school building/facilities	7
Other reasons/no reason specified	27

We asked leaseholders several questions about the family's involvement with the focal child's school. Most leaseholders reported that they or the child's primary caregiver had met the child's teacher (82%, n=162 of 197; Q133). Many had also attended an event or meeting at the child's school (65%, n=128 of 198; Q134). Those who had not yet gone to an event or meeting at the school were asked in an open-ended question why they had not been able to visit the school. Many indicated that there had been no events or meetings yet to attend (43%, n=30 of 70; Q135). For nearly a quarter of leaseholders and caregivers, having to go to work or school prevented them from going to the child's school (24%, n=17 of 70; Q135). For some households, younger children at home (5%, n=4 of 70; Q135) or being too busy (5%, n=4 of 70; Q135) prevented them from visiting the school.

5.2 Children's Participation in Activities and Outdoor Play

The survey included several questions regarding the focal child's participation in activities and playing outdoors. Leaseholders were asked about whether the focal child participated in activities and the types activities that the child participated in (Q143, Q144). The types of activities asked about were sports, after school programs, scouts, fine arts programs (art, music, drama, dance), tutoring, mentoring, or any other activity. Overall, nearly half of the focal children participated in at least one type of activity (47%, n=103 of 219; Q143). Of those children living in CHA housing, 52% (n=32 of 62) were involved in activities; somewhat fewer children in HCV housing participated in activities (43%, n=67 of 154), although this difference was not significant. Children who participated in activities most often reported being involved in sports (65%), after school programs (50%), and fine arts programs (29%). The mean number of activities children participated in was 3 (n=94).

If the focal child was not involved in any activities, the leaseholder was asked about the reasons why (Q146). Leaseholders were presented with a list of possible reasons and were asked to indicate all the reasons why the child was not participating in activities. Many leaseholders indicated that the focal child was not old enough to participate in activities (34%, n=39 of 116). Other common responses were that the child was not interested (22%, n=25 of 116) or that there were no activities available in the area (15%, n=18 of 116).

Leaseholders were asked whether there were safe places to play outside and how safe it was to play outdoors (Q151, Q152). Many leaseholders (78%, n= 166 of 214) reported that there were safe places nearby for the children to play outside. As Table 43 below shows, overall, significantly more children living in HCV housing experienced safer neighborhoods for outdoor play than children remaining in CHA housing.

Table 42. Are There Safe Places to Play Outside

Q151.	CHA % Base N=62	HCV % Base N=148	Total % Base N=214
Yes	66	84	78

Note: Ns reflect the number of respondents over which the mean was calculated. The Ns in the Total column exceed the number of respondents in the CHA and HCV columns combined because of missing data on current housing status for some respondents.

Children in CHA housing were reported by leaseholders to play outdoors 4.9 days per week on average. For children in HCV housing the mean was slightly higher, 5.5 days per week, but not significantly different. In addition, leaseholders living in HCV housing seemed more likely to indicate that their current neighborhood was safer than where they lived before they relocated (see Table 43); because of the small number of CHA leaseholders this difference was not tested.

Table 43. How Safe is Current Neighborhood Compared to Neighborhood Before Relocation

Note: Ns reflect the number of respondents over which the mean was calculated. The Ns in the Total column exceed the number of respondents in the CHA and HCV columns combined because of missing data on current housing status for some respondents.

5.3 Children's Health

The survey asked several questions about the focal child's health. Leaseholders were asked whether the child's health was excellent, very good, good, fair or poor. In addition, leaseholders were asked how the child's health was compared to one year ago.

Overall, the leaseholders rated the children's health highly, with 70% of children considered to be either in excellent or very good health (Q147; see Table 44). Some respondents indicated that their child's health was much better compared to a year ago, but most thought that the child's health was about the same (Q148; see Table 45).

Table 44. Child's Health Status

Table 45. Child's Health Status Compared to One Year Ago.

Q148.	% Base N=219
Much Better	14
About the Same	84
Much Worse	2
Total	100

Leaseholders were asked whether the focal child had asthma and whether the number of asthma attacks the child had had changed compared to a year ago (Q149, Q150). Compared to national estimates, children from CHA developments are more likely to suffer from asthma. Overall, 8.5% of children younger than 18 years of age are reported to have asthma; 13.6% of black children under 18 years have asthma.⁴ In comparison, 17% (n= 37 of 221) of leaseholders reported that the focal child had asthma. About 49% of leaseholders (18 of 37) indicated that the number of asthma attacks was less than a year ago (Q150). It is possible that the housing that leaseholders were moving to contributed to the lessening of asthma attacks, or that as the focal children grew older, the number of asthma attacks decreased on its own.

5.4 Childcare

Dependable and safe childcare is a prerequisite for leaseholders who wish to go to school, receive job training, or go to work. The baseline survey indicated that in 67% of households there was no adult who was employed. To ascertain whether childcare needs contribute to difficulties in seeking schooling, job training, or employment, the follow-up survey asked detailed questions about childcare arrangements and needs.

The questionnaire asked who cares for the focal child when the leaseholder or primary caregiver is away from home. Leaseholders were asked about 10 specific types of care arrangements. For each type of care that the child was in, the leaseholder indicated the number of hours the child spent in that care arrangement per week or month. Table 46 below shows the percentages of leaseholders who indicated using each

⁴ Data from the National Health Interview Survey, 2003. Web site http://www.cdc.gov/asthma/NHIS/2003_table4-1.htm accessed 2/2006.

care option. The data are presented for all leaseholders with children and also separately for those in CHA housing and those in HCV apartments.

Table 46. Who Cares for Child

Q156.	CHA % (Base N)	HCV % (Base N)	Total % (Base N)

k. other	9 (62)	<1 (155)	3 (221)

Note: Ns reflect the number of respondents over which the mean was calculated. The Ns in the Total column exceed the number of respondents in the CHA and HCV columns combined because of missing data on current housing status for some respondents.

The table above shows that for almost half the families living in CHA, the child is in school during some of the times they are not home. The second most frequently mentioned type of care for families in CHA was relatives living outside the household. For families in HCV housing, half cited that relatives took care of the child when all adults were away from home. About a third of families in HCV housing indicated that the child is in school during some times they need to be away from home.

Leaseholders estimated the number of hours the focal child spent in each type of care. Although leaseholders could have estimated time in child care per week or per month, in the data presented the estimates were converted to hours per week. In Table 47 below, we present data on the mean number of hours children are spending in each type of care arrangement. Children who do not use a particular type of care are not included in the mean calculation of hours.

Table 47. Mean Hours Per Week Spent in Each Type of Child Care

Q157.	CHA Mean Hours (n)	HCV Mean Hours (n)	Total Mean Hours (n)

k. other	28.1 (3)	7.0 (1)	24.0 (4)
TOTAL	31.7 (52)	20.2 (144)	23.2 (199)

Note: Ns reflect the number of respondents over which the mean was calculated. The Ns in the Total column exceed the number of respondents in the CHA and HCV columns combined because of missing data on current housing status for some respondents.

About half of the focal children spent time in the care of relatives. However, they spent relatively little time in this type of care, averaging 9.1 hours per week. Often, the child was in school (22.0 hours/week, n=58) or at an after school program (8.9 hours/week, n=35) when household adults needed to be away from home. Many children also took care of themselves (16.8 hours/week, n=45), or spent time in the care of an older sibling under the age of 18 (5.3 hours/week, n=37). Children who were cared for at a child care center had the highest reported average hours of care (34.1 hours/week); however, only 6 children were in this type of care.

The data on number of hours in care suggest that children in CHA housing are spending more time in care than those in HCV housing. However, much of the child care time reported for children living in CHA is time spent caring for themselves or in “other” types of care arrangements.

The large majority of leaseholders was either very satisfied or satisfied with their child care arrangements (98%, n=213 of 218; Q158). Only 2% (n=5 of 217; Q159) currently needed assistance finding child care arrangements.

Almost half of leaseholders (48%, n=104 of 219; Q160) indicated that there was an adult in the household who was working, in school, or in job training. Of these leaseholders, 11% (12 of 104; Q161) said that there was a time they needed child care to go to work, school, or job training, and could not find care. It is of interest to note that all of these leaseholders were in HCV housing. For 4 of these 10 leaseholders, they could not find care 2-3 times in the last month (Q162).

Overall, the findings on child care suggest that most households with children are able to handle their child care needs. Most are satisfied with their arrangements and do not need help finding child care. Although there have been times in which an adult could not obtain child care to go to work, school, or job training, these instances are relatively infrequent.

Section 6: Economic Hardship

The follow-up survey included a series of questions designed to evaluate the level of economic hardship the leaseholders were experiencing. We asked all leaseholders whether they had experienced any of the following hardships in the last 12 months:

- Gas or electricity turned off because could not pay bill
- Telephone disconnected/gone without a phone because could not afford it
- Could not pay rent
- Belongings repossessed because could not pay the bill
- Without money to buy food

If a leaseholder reported that they had experienced a hardship, they were asked how many times it happened.

An index of level of hardship was created by summing the number of hardships that each leaseholder reported experiencing. More than half of leaseholders (61%) experienced none of the hardships asked about during the past 12 months. Nearly one-quarter (23%) reported experiencing one hardship; 16% experienced two to four of the hardships.

As Table 48 below shows, the hardship reported most often by leaseholders was having no telephone service. Approximately 10% of leaseholders reported having no gas or electricity, not being able to pay rent, or not having money to buy food during the last 12 months. Leaseholders without enough money to buy food reported experiencing this difficulty an average of 3 to 4 times in the last 12 months.

Table 48. Leaseholders' Experiences With Economic Hardship in the Last 12 Months

Q53-Q57.	Yes		How Many Times	
	%	Base n	Mean	Base N
Gas or electricity turned off *	12	314	1.1	37
Telephone disconnected/gone w/o a telephone*	29	346	1.6	93
Could not pay rent*	10	347	2.6	32
Belongings repossessed	1	354	1.5	4
Without enough money to buy food	12	354	3.5	41

Note: Leaseholders who do not pay for gas or electricity, do not own a phone, or do not pay rent are excluded from the analysis.

Economic hardships experienced by leaseholders living in CHA housing may differ from that of leaseholders who have moved to HCV apartments. For example, one might expect that those living in private HCV apartments are faced with higher expenses and may therefore experience more hardship. To examine this possibility, we compared reports of economic hardship by whether the leaseholder was living in a CHA or HCV

apartment. We found that for most of the kinds of hardship we asked about, leaseholders' experiences did not differ by their housing type. However, reports of having gas or electric service turned off within the last 12 months were found to be higher for leaseholders living in HCV than in CHA (17%, n=32 of 192 for HCV vs. 3%, n=4 of 118 for CHA; $t=3.7$, $df=302$, $p<.05$).

Section 7: Leaseholders' Health

As in the baseline survey, in the follow-up survey all leaseholders reported on their general health status, any health problems they may have been experiencing, and the degree to which these problems interfered with their daily lives. Leaseholders were also asked about their health compared to the previous year and their emotional health. Overall, there were no major differences in the health of the leaseholders across the two waves of data collection.

Leaseholders were asked whether their health was excellent, very good, good, fair, or poor. Using a scale of 1 to 5, in which 1 represents excellent health and 5 represents poor health, a mean rating of health was calculated across respondents. The overall mean rating was 2.9, which was not significantly different from the baseline average. Similar to the baseline survey, the majority of these leaseholders, approximately 71%, rated their overall health to be “about the same” as it was the previous year (see Table 49).

Table 49. Current Health Status of Phase III Leaseholders at Follow-up

Current Health Status	Phase III Leaseholders		
	Base n	N	%
Excellent/Very Good	353	112	32

Worse than last year		9	8
Fair/Poor			
Better than last year	133	11	8
About the same as last year		80	61
Worse than last year		42	31

As in the baseline survey, we noted differences in self-reported health status of the leaseholders as compared to a national sample on the questions concerning current health status and health compared to one year ago. For this comparison, we took the subset of leaseholders who are African American women, which comprised the majority of the sample of leaseholders. National level data were taken from the 2003 National Health Interview Survey (NHIS)⁵. Compared to a national sample of females and a

⁵ Lethbridge-Cejku M, Vickerie J. Summary Health Statistics for U.S. Adults: National Health Interview Survey, 2003. National Center for Health Statistics, Vital Health Stat 10(225), 2005.

national sample of African American females, African American female leaseholders tended to report poorer health (see Table 50).

Table 50. Current Health Status Comparison of Leaseholder to National Sample of Women

Current Health Status	Phase III Leaseholders African American Women			National Sample of Women	
	Base n	N	%	African American Females %	All Females %
Excellent/Very Good	278	94	34	49.6*	61.3*

About the same as last year		55	57	53.9	50.5
Worse than last year		34	35	28.9	33.6

Note: The National Sample of Women data is reported by the 2003 National Health Interview Survey (NHIS). The symbol * indicates a significant difference between female Phase III leaseholders and the National Sample of Women.

Comparing the findings on current health status across the baseline and follow-up surveys, African American female leaseholders were consistently reporting excellent or very good health at a lower rate than the national sample of both African American females and all females. In addition, in both surveys, the leaseholders reported higher rates of fair or poor health as compared to both national samples.

Leaseholders also rated their emotional health. Sixteen percent of the sample in the follow-up reported feeling tense or nervous “very often” while 12% of the sample reported feeling sad or blue “very often.” Nearly half of leaseholders reported that they hardly ever experienced days of emotional distress (45% and 46% for nervousness and sadness, respectively). There was also a moderate correlation between feeling nervous or tense and sad or blue ($r = .57$, $p < .01$). The correlation between general health and emotional distress was .33 ($p < .01$) for anxiety related distress and .18 ($p < .01$) for depression-related distress. As in the last round, increasing age was associated with poorer health ($r = .33$, $p < .01$), but not with feeling sad/blue ($r = -.01$, $p = .86$). However, in this follow-up there was a small but significant relationship between age and frequency of feeling tense or nervous. Increased age was associated with more often experiencing days of feeling nervous or tense ($r = .12$, $p < .05$).

Leaseholders were again asked to indicate whether they had experienced a series of 18 health problems and how much each experienced problem affected their daily activities. Leaseholders were asked whether the health problem affected them a great deal, some, only a little, or not at all. On average, leaseholders reported 2.5 health problems. Table 51 shows the prevalence rates of the different illnesses and the percentage of those respondents who said the illness interfered with their activities “some” or “a lot.”

For leaseholders who reported at least one health problem, 20% felt that they were in very good to excellent health, 32% felt that they were in good health, and 48% felt that they were in fair to poor health. Only 13% of these individuals felt that they were in better health compared to last year, while 68% felt that their health was about the same as it was last year, and 19% felt that they were in poorer health compared to last year.

Table 51. Health Problem Index for Phase III Leaseholders

Health Problem Index	Phase III Leaseholders

p. Sexually transmitted diseases	353	0	0	0
q. HIV positive or AIDS	353	0	0	0

In Table 52, we compare data for leaseholders who are African American women with national data on women and African American women from the NHIS. The NHIS provides data on the percentage of women who experience a health problem, but does not indicate how much the problem interferes with daily activities.

Table 52. Health Problem Index Comparison of Phase III African American Women Leaseholders to National Sample of Women

Health Problem Index	Phase III Leaseholders African American Women				National Sample of Women	
	Problem Present			Interferes with daily activities some/a lot	African- American Females	Overall

f. Kidney or liver problems	278	11	4	76		
c. Cancer	278	11	4	68	3.7	7.1*
l. Sickle cell anemia	278	9	3	0		
p. Sexually transmitted diseases	277	0	0	0		
q. HIV positive or AIDS	277	0	0	0		

Note: National data are not available for all health problems asked about in the Resident Relocation Survey. For asthma, NHIS data on whether ever had asthma, rather than still have asthma, are used since this version is closer to the RRS question. Note that hearing and vision questions are much more specific in the NHIS than in the RRS. Heart trouble or heart attack in the RRS is compared to heart disease, all types (NHIS). The symbol * indicates a significant difference between female Phase III leaseholders and the National Sample of Women.

Reports of hypertension, vision problems, arthritis or rheumatism, asthma and diabetes were higher among the leaseholders as compared to both national samples. Reports of hearing problems, stroke and cancer were higher compared to a national

sample of all women, but not compared to a national sample of African American women.

A disability index was created by summing across all the health problems weighted by the extent to which these problems affected daily functioning. Scores on this disability index could range from 0, meaning a respondent had no problems that affected their function, or 4, meaning respondents had health problems that greatly affected their functioning. The average disability index across all leaseholders who reported health problems in the follow-up was .36.

As in the baseline survey, we looked at health problems as they related to certain demographic characteristics. Table 53 compares the health problems index and the disability index by these background characteristics. Significance testing of the subgroups was again done using a multiple regression model, therefore significant differences for one set of comparisons (e.g., education status) are independent of correlations between that variable and other characteristics and background variables in the model. Older leaseholders reported more health problems than did younger ones. There was no difference in reported health problems based on marital status. However, leaseholders with less than a high school education reported more health problems than leaseholders with more than a high school education. Leaseholders who were in the “Other” employment category (i.e., temporarily laid off, retired, permanently disabled, keeping house, in school, or some other unspecified status) reported more health problems than leaseholders who were working full-time. Leaseholders in the second income group (\$4,000-\$7,000 annual income) and leaseholders in the third income group (\$8,000-15,999) both reported more health problems than those in the highest income group (\$16,000 and above annual income). However, leaseholders in the lowest income group reported fewer health problems than leaseholders in the highest income group. Number of health problems reported may be related to the age of the leaseholders. Leaseholders in the second and third income groups were on average slightly older (means of 53.2 years and 51.1 years, respectively) as compared to leaseholders in the lowest and highest income groups (means of 41.8 years and 40.7 years, respectively).

Table 53 uses the same groups to compare scores on the disability index for people who reported at least one health problem. Older leaseholders had a higher disability score than younger leaseholders. Leaseholders with less than a high school education had a higher disability index than leaseholders with more than a high school education, while leaseholders with a high school education had the lowest disability index.

Table 53. Mean Number of Health Problems and Total Disability Index Scores by Background and Demographic Characteristics

Over \$16,000	56	2.32	2.43	.30	.35

Section 8: Social Services

All leaseholders were asked to indicate if they or any members of their household needed social services during the relocation process. These services included help with health related problems (Q121, Q122, & Q58-Q69), finances, family, employment, and legal problems.

Table 54 shows the number of services that leaseholders or household members reported needing during the relocation process. Leaseholders reported needing an average of 1.6 services.

Table 54. Follow-up: Number and Percent of Social Services Needed and Received

Number of Services	Needed Help % Base N=353
0	36
1	23
2	15
3	11
4	6
5	4
More than 5	5
Total	100

When leaseholders indicated a need for a particular service, they were then asked to indicate if they had asked for help with that service, if they had received help, and who gave them the help. Leaseholders were also asked to rate how helpful they found the services they received, on a scale that included ratings of “not helpful,” “somewhat helpful,” or “very helpful.”

Table 55 shows each service and the percentage of leaseholders who reported a need for that service, asked for help, and received help. Respondents most often indicated needing help with paying utilities (29% of respondents reported this need), finding a job (25%), and rebuilding their credit history (23%). Although needing help rebuilding credit was one of the most frequent services leaseholders needed, less than one quarter (24%) of the people asked for help, and only ten percent of individuals needing help received the help that they needed. However, despite this exception and the exception of getting help with a GED, and managing money, the majority of respondents tended to ask for and receive assistance for these needs. Also when help was provided, on average, 98% of the leaseholders rated the services to be at least “somewhat helpful”.

Q66. Domestic violence	353	2	8	89	7	100
Q67. Legal Assistance	353	10	34	71	34	53
Q68. Anything else	354	14	48	77	48	24

As in the first wave of data collection, we looked at the need for and receipt of services based on different demographic characteristics. As shown in Table 56, younger leaseholders more often reported needing services than older leaseholders ($t = 2.20$, $p < .05$). However, these younger leaseholders more often reported receiving help than older leaseholders ($t = 1.96$, $p = .05$). Leaseholders in a temporary unit more often reported needing services than leaseholders still in their original unit ($t = 2.63$, $p = .01$). More unemployed leaseholders needed services than those who were employed ($t = 2.88$, $p < .01$) or in some other arrangement ($t = 2.81$, $p < .01$). There were no other significant differences in need for services or receipt of help for those services across the different demographic groups.

Table 56. Service Need and Receipt by Demographics

AGE	Services Needed %	Services Received %	Base N
Younger leaseholders	70	52	161
Older leaseholders	59	41	190
EMPLOYMENT STATUS			
Working	58	46	94
Unemployed	77	52	103
Other	60	43	156
INCOME LEVEL			
\$0-7,999	69	48	221
Over \$8,000	60	48	104
SETTLEMENT STATUS			
Permanent Unit	64	46	173
Temporary Unit	71	50	116
Original Unit	52	41	65

Leaseholders were asked to name the sources from which their household received help for service needs. These open-ended responses were coded into seven categories. To compare the level of provided by difference sources, sources of help were summed across all services and all leaseholders. Table 57a shows the total number of services for which leaseholders received help and the sources of that help. Leaseholders most often reported seeking help from service providers that were tailored to their specific service needs. For example, they often reported receiving help for physical health from medical professionals or help with legal issues from legal professionals. Services provided by the CHA, Relocation Counselor and Service Connector accounted for 29% of the help received.

Table 57a. Sources of Service Help

Received help from:	Number of instances of help received	%
Relocation Counselor, Other CHA-related	98	18
Service Connector	57	11
Outside Service Provider	42	8
Church	8	1
Other	52	10
Family and Friends	102	19
Need Specific Provider	176	33
Total	535	100

Note: Other Service Providers are agencies or organizations (other than Relocation Counselor, Service Connector, or other CHA-related) that provided help. Need Specific Providers are providers whose services are focused on particular needs; several questions elicited numerous responses from this category of providers. For Q61 (buying food), Q64 (rebuilding credit history), Q65 (drug or alcohol problems), Q67 (legal assistance), Q121 (physical health problems/finding a doctor), and Q122 (mental health problems),

Need Specific Providers were defined as follows: Q61—food pantry, food stamps, public aid; Q64—lawyer, financial services agency; Q65—doctor or hospital, drug treatment program; Q67—lawyer, legal aide; Q121—doctor, hospital, other medical professionals; Q122—doctor, hospital, other medical professionals, social worker. Sources of help that were not service providers or did not belong in other categories were classified as Other sources of help. Examples of Other sources of help include: myself, job, library.

Leaseholders were asked to name the sources from which their household received help for service needs. These open-ended responses were coded into seven different categories. To determine from what source(s) respondents received help, an index of the total number of services for which help was received was created by summing across all services and all respondents. Table 57b. shows the total number of services for which respondents received help and the sources of that help. In general, respondents most often reported seeking help from service providers that were tailored to their specific service needs. For example, leaseholders often reported receiving help for physical health from medical professionals or help with legal issues from legal professionals.

Table 57b. Source of Service Help

Number of instances of help received	283
Received help for at least one problem from:	
Relocation Counselor	0% (0)
Service Connector	14% (39)
Outside service provider	12% (33)
Church	2% (7)
Other	11% (32)
Family and Friend	20% (56)
Need Specific Provider	41% (116)

Note: Counts of number of instances of help received from the Relocation Counselor and Service Connector were based on the number of times the leaseholder said “Relocation Counselor” or “Service Connector.” CHA will examine verbatims to determine if any agency names specified were actually Relocation Counselors or Service Connectors.

Section 9: Finding an Apartment

At the time of the baseline survey, many leaseholders had already relocated, at least temporarily, to subsidized apartments with a Housing Choice Voucher. Any leaseholder who had moved to a subsidized apartment since the baseline, or was in the process of moving, was asked about the process of finding an apartment (n=49, 14% of leaseholders).

A condition of eligibility to remain in a public housing unit or to obtain a Housing Choice Voucher for use in the private rental market was that the leaseholder be lease compliant. Leaseholders who were in subsidized private apartments and hoped to get a new or rehabilitated CHA unit were asked whether they were lease compliant. Almost all leaseholders reported that they were lease compliant (97%, n=58 of 59; Q17d). Most of these leaseholders thought they were very likely to maintain their lease compliance (94%, n=54 of 58; Q17e), with only a small portion of these leaseholders (6%, n=4 of 58) reporting that they were only “somewhat likely” to remain lease compliant. When leaseholders expressed concerns about maintaining lease compliance, problems with paying bills was the most frequently expressed concern (Q17f). Of those leaseholders planning to move to private subsidized housing with an HCV, 12% stated that they were not yet living in HCV housing because they were working on becoming lease compliant (n=3 of 21; Q18).

As part of the Relocation process, leaseholders must move from their original CHA units into other housing. Sometimes, leaseholders must live in more than one temporary location before settling in their permanent housing choice. We asked leaseholders who had moved from their original units to report how many other places they had lived before moving to their current residence. Leaseholders reported having lived in an average of 1.2 places since leaving their original unit (Q8, Q13, Q16, Q21, Q26). This finding indicates that most leaseholders who had relocated had moved only once since the relocation process began. Only 16% of leaseholders had moved more than one time during the relocation process.

Leaseholders whose permanent or temporary housing choice was a private subsidized apartment were asked about the process of relocating with a Housing Choice Voucher (n=49). They were asked about their experiences getting the voucher, the name of the service agency that was supposed to help them, and their perceptions of the relocation counselor. If the leaseholder had already moved into a private apartment (n=27), he/she was asked an additional set of detailed questions about the process of finding an apartment.

Fewer than 20% of the leaseholders who needed a voucher (18%, n=9 of 49; Q27) cited having problems getting the voucher. Of these leaseholders, four experienced problems because they were not yet lease compliant; one had a voucher that expired while the leaseholder was searching for a house, another leaseholder was getting evicted, and the remaining leaseholder cited other reasons.

As part of relocation counseling, leaseholders are to receive information about opportunity areas. Opportunity areas are defined as those areas in which the poverty rate is less than 23.49% and the percentage of African American residents is less than 30%. About two-thirds of leaseholders (62%, n=30 of 49; Q30) reported receiving information on opportunity areas. Leaseholders who were employed seemed more likely to be told about opportunity areas than those who were not employed. However, this pattern should be interpreted with caution because of the small numbers of leaseholders who were asked this question.

About one-third of those planning a move to subsidized housing had worked with a relocation counselor (33%, n=16 of 49; Q31). Thirty-nine percent (n=19) did not work with the relocation counselor and 28% (n=13) did not yet have their Housing Choice Vouchers. Of those who did not work with the relocation counselor, many were from developments which were to be rehabilitated; no relocation counselors were assigned to those buildings. The leaseholders who worked with a relocation counselor were asked to report on their experiences. It is important to interpret these data with caution, however, since the sample size is small.

All 16 leaseholders working with the relocation counselor reported they were asked about their neighborhood preferences (Q32). Almost all of these leaseholders also reported that the Relocation Counselor helped them look for an apartment (95%, n=15 of 16; Q34); only one respondent indicated that a counselor did not help them look. The leaseholder who reported not working with the Relocation Counselor to look for an apartment was asked why he/she did not receive this help (Q35). To protect that respondent's confidentiality, we will not present the data from this question.

CHA required that the relocation counselor give the leaseholders information about at least five apartments and that the relocation counselor show leaseholders at least three apartments. Nine respondents received information about fewer than three apartments; six respondents received information about eight or more apartments. The number of apartments respondents received information about ranged from 0 to 60. Nine respondents reported that a Relocation Counselor showed them fewer than three apartments; the remaining seven saw five or more apartments with the Relocation Counselor. The number of apartments that Relocation Counselors shows respondents ranged from 0 to 15.

The leaseholders were asked about their experiences in working with the Relocation Counselor and the agency. They were presented with a series of statements, some phrased positively (for example, it was easy to make an appointment) and others phrased negatively (for example, the counselors were unpleasant or rude) and asked to indicate whether the statement was true or false for them. Most leaseholders agreed with all the positive statements about working with the counselor and disagreed with the negative statements. Table 58 shows responses to each statement.

Indices measuring number of positive service delivery attributes and number of negative service delivery attributes were constructed by adding up the number of "true" and "false" ratings for positive and negative statements. On the positive index, 78% of

respondents agreed with all three positive attributes. With respect to the negative index 78% of respondents disagreed with all four attributes. No leaseholders agreed with more than two of the negative attributes.

Table 58. Leaseholders' Experience Working with the Relocation Counselor

Q36.	% Responding "True" Base N=16
a. Easy to make appointment	89
b. Long wait for help	11
c. Difficult to understand materials	5
d. Enough time for appointments	89
e. Counselors unpleasant/rude	0
f. Appointment usually rushed	16
g. Counselors helped me	89

Leaseholders who worked with a Relocation Counselor were asked whether they needed help with two specific items while searching for an apartment (Q39), choosing an area to live and childcare. They did not report needing help with these items.

Leaseholders who had found and moved to a private subsidized apartment (with or without the help of the Relocation Counselor) were asked about several factors that may have been a problem for them in finding an apartment with a Housing Choice voucher (Q50). For each factor listed in Table 59 below, leaseholders indicated whether they experienced a big problem, some problem, or no problem.

Table 59. HCV: Apartment Search Difficulties

Problems (Q50)	Percent Big Problem	Percent Some Problem	Percent No Problem	Total % Base N
a. Finding Enough Bedrooms	31	13	56	100 (26)
b. Finding Place They Liked	40	20	40	100 (26)
c. Finding Landlord Who Will Accept Voucher	21	23	56	100 (26)
d. Access to Transportation for Search	25	18	57	100 (25)
e. Landlord Did Not Want to Rent Due to CHA History	27	10	63	100 (26)

Table 59. HCV: Apartment Search Difficulties (continued)

Problems (Q50)	Percent Big Problem	Percent Some Problem	Percent No Problem	Total
f. Landlord Did Not Want Children in Apartment	3	7	90	100 (26)
g. Other Problem	14	4	82	100 (25)

The most frequent problem cited among those with vouchers was finding an apartment they liked (60% reporting this as a “big” problem or “some” problem, n=16 of 26). This problem was followed closely by finding a place with enough bedrooms and finding a landlord who would accept vouchers (44% reporting a “big” problem or “some” problem, n=11 of 26). However, it is important to note that for many of the potential factors, leaseholders reported having no problem.

Many leaseholders reported having sufficient time to look for an apartment and at least two apartments from which they could choose. More than half of leaseholders who had found an apartment (56%, n=15 of 26; Q46)) felt they had enough time for the apartment search; nearly three-quarters (73%, n=19 of 26; Q49) stated that they found at least two apartments into which they could move. Of the leaseholders who felt they needed more time, most chose the only apartment they could find (n=5 of 7; Q49).

Of the leaseholders who received help from the Relocation Counselor in looking for an apartment, most did not find the unit they chose through the Relocation Counselor (82%, 12 of 14; Q34 and Q43). The leaseholders who found a unit on their own (including leaseholders who had worked with the Relocation Counselor and those who chose at the outset to look on their own) were asked how they found their new unit (Q44); the data are presented in Table 60 below.

Table 60. How Leaseholders Not Working With Relocation Counselor Found Their New Unit

Q44.	% Base N=24
Newspaper	29
Walking or Driving Through Neighborhood	25
Friends or Family	22
Other	25
Total	100

Leaseholders who worked with a Relocation Counselor but found an apartment without the assistance of the counselor, were asked why they decided not to take the recommended apartments. They were presented with a list of possible reasons and asked

to choose one main reason. As Table 61 shows, there were many varied reasons for not renting a recommended apartment.

Table 61. Main Reason for Not Renting Apartments Recommended by Relocation Counselor

Q41.	% Base N=16
Apartment Not Big Enough	16
Apartment Not Near Family or Friends	16
Did Not Like Apartment	17
Other Reason	27
Counselor Made No Recommendation	22
Total	100

The twenty-seven leaseholders who rented an apartment with a Housing Choice voucher were asked about the reasons they decided to live in the place they chose (Q47). Leaseholders were presented with a list of possible reasons and asked to choose the main reasons why they decided on their apartment. As Table 62 shows, the most frequently cited reasons for choosing the apartment they did was that they felt comfortable in the neighborhood. Getting a bigger or better apartment and liking the apartment were other main reasons for their choice.

Table 62. Main Reasons for Deciding on an Apartment

Affordable Rent	3
Recommendation of Counseling Agency	0
Only Unit Available	0

Section 10: Overall Satisfaction with Relocation

As in the first round of data collection, leaseholders were asked about their overall satisfaction with the relocation process. They again reported whether they had any special needs that they thought should have been considered and whether they were treated fairly and with respect during relocation. For each question leaseholders elaborated on how and why their special needs were or were not taken into consideration or how they were or were not treated fairly and with respect. The same coding scheme used on these open-ended questions in the first round of data collection was again applied in this round.

Ten percent (n= 35 out of 349) of the leaseholders felt that they had special needs that should have been addressed during the relocation process. It is important to note that leaseholders used their own interpretation of the term “special needs” to answer this question; the term was not meant to refer specifically to disabilities. Of the individuals with special needs, only 15 percent (n=5 out of 35) felt that these needs were taken into consideration. Table 63 shows how leaseholders felt their needs were not taken into consideration. Leaseholders could have offered one or more responses to this question.

However, despite only a small number of leaseholders reporting that their special needs were taken into consideration, most leaseholders favorably evaluated their experiences with the CHA. Eighty-five percent of leaseholders (n= 290 out of 339) felt that they were treated fairly in the relocation process, and 88 percent (n= 299 out of 341) felt that the CHA showed them respect during the relocation process. Leaseholders also provided reasons why they felt they were or were not treated fairly and were and were not shown respect, shown in Tables 63 through 65.

Table 63. Leaseholders with Special Needs Not Taken Care of

Q166. Why were your special needs not taken care of?	% Base N=30
Did not receive enough information about relocation	7
CHA did not answer questions or give help	27
Did not give an accessible unit	27
Did not receive help with relocation	30
Other	13

Note: Base N reflects number of leaseholders responding. Each leaseholder could provide more than one reason why their special needs were not take care of. A total of 31 reasons were given for Q166.

Table 64. Leaseholder Reports on Being Treated Fairly or Not Being Treated Fairly

Q168. In what way were you treated fairly?	% Base N=286
CHA told leaseholder exactly what to do	17
Got help with the moving process	38
All needs met and questions answered	29
CHA helped find an apartment/neighborhood leaseholder wanted to live in	12
CHA treated all tenants the same	10
Other	14
Q169. In what way were you not treated fairly?	% Base N=49
Did not get to move to preferred apartment or area	18
Did not get help finding apartment	4
Had problems with the moving process	39
CHA did not explain the process or answer questions	22
Did not have enough time to find a place to move	8
Other	22

Note: Base Ns reflects number of leaseholders responding and %s reflect percentage of leaseholders providing each reason. Each leaseholder could provide more than one reason why they were or were not treated fairly. A total of 336 reasons were given for Q168 and 56 reasons for Q169.

Finally, leaseholders were asked whether the CHA showed respect and to explain how the CHA did or did not show respect. These findings are presented in Table 65.

Table 65. Leaseholder Reports on How the CHA Showed or Did Not Show Respect

Q171. In what way did the CHA show respect?	% Base N=299
CHA was available to answer questions and give help	28
Staff members were nice/helpful	33
CHA paid for or helped with move	18
CHA helped find place to live and offered choices	14
CHA kept leaseholder informed	18
CHA provided resources for food, utilities, furniture, etc.	5
Other	9
Q172. In what way did the CHA not show respect?	% Base N=41
CHA looked down on residents and acted rude	21
CHA did not keep leaseholder informed	9
CHA did not answer request for needs	20
Problems with arranging move	21
Other	32

Note: Base Ns reflects number of leaseholders responding and %s reflect percentage of leaseholders providing each reason. Each leaseholder could provide more than one reason why they were or were not shown respect. A total of 379 reasons were given for Q171 and 41 reasons for Q172.

Special needs, fairness and respect were compared across the leaseholder's age, parenting status, education, employment, and housing status. Table 66 shows the percentage of respondent who had special needs, were treated fairly and were shown respect. A significantly smaller percentage of leaseholders with less than a high school education reported being treated fairly compared to leaseholders with at least a high school education. A significantly higher percentage of younger leaseholders indicated that the CHA treated them with respect compared to older leaseholders.

Table 66. Special Needs, Fairness and Compassion Ratings by Background and Demographic Characteristics

	Had Special Needs		Treated Fairly		CHA showed Respect	
	Percent yes	Base n	Percent yes	Base n	Percent yes	Base n
AGE						
Younger	8	161	89	157	93*	159
Older	12	187	82	180	83*	180
Observations excluded						
EDUCATION						
Less than HS degree	9	141	80*	138	85	138
HS degree/GED	10	119	90*	117	92	115
Education past HS	9	83	86	79	87	83
Observations excluded						

Note: Cells sharing an * are significantly different at $p < .05$.

Leaseholders who had moved out of their original CHA building were again asked if they believed that they were better, worse, or about the same with regard to opportunities since they moved (Q176). Overall, 59% (n=163 of 276) of these leaseholders said that they felt better about their opportunities, 34% (n=94 of 276) said that they felt the same, and 7% (n=19 of 276) said that they felt worse.

Differences in leaseholders' perceptions of opportunities were examined by current housing status, that is, whether the leaseholder was currently living in CHA public housing or in a private apartment with a Housing Choice Voucher. The results of the analyses are shown in Table 67. Significantly more leaseholders who were in private units with a HCV felt that their life opportunities were better since they had moved, compared to those who were living in public housing.

Table 67. Current Housing Status by Opportunities to Improve Life

Current Housing Status	Felt better, worse or same about opportunities to improve life		TOTAL
	Better	Same/worse	
	%	%	% (Base N)
CHA	43	57	100 (80)
HCV	67	33	100 (192)

The same set of analyses were conducted on the question asking whether the move made it possible for leaseholders to do things that would benefit themselves or their families. Again, only families who had left their original units responded to this question. Results are shown in Table 68. Significantly more leaseholders who had settled into their private market apartments felt that their move would benefit themselves and their family compared to leaseholders who chose to remain in CHA housing. No other differences were significant.

Table 68. Current Housing Status by Q177

Current Housing Status	Move allow you to benefit self or family		Base N
	% Yes	% No	
CHA	29	71	78
HCV	59	41	181
Total	50	50	261

Note: Current housing status missing for 2.

Leaseholders who said that they believed that the move gave them or their families the opportunity to better themselves were asked what those opportunities were. Because those who have permanently settled into a private market living situation are the largest, it is useful to examine their responses. Open-ended responses were coded into the following categories: (1) Better environment and living space; (2) Increased opportunities for jobs and education; (3) Convenience, i.e., closer to necessary amenities or family; (4) feeling better about oneself, and (5) Other reasons. Percentages are shown in Table 69.

Table 69. Benefits from Move

Q178. Benefit	% Base N=130
Better Environment/Living Situation	64
Job/Education	21
Convenience	18
Feel better about self	9
Other	12

Note: Base N reflects number of leaseholders responding and %s reflect percentage of leaseholders providing each reason. Leaseholders could provide more than one explanation for how the move benefited them. A total of 161 reasons were given for Q178.

Leaseholders were also asked to provide open-ended responses to the biggest problems they encountered during the relocation process. These descriptions of problems were coded into the response categories shown in Table 70. The most frequently problem was the moving process.

Table 70. Biggest Problems with Relocation

Q173. Problems	% Base N=165
CHA did not give enough information	13
Finding a place to live	22
The moving process	47
Other	24

Note: Base N reflects number of leaseholders responding and %s reflect percentage of leaseholders citing each problem. Leaseholders could cite more than one problem with relocation. A total of 175 problems were collected for Q173.

Leaseholders were also asked to provide suggestions for how the CHA could improve the relocation process. These open-ended responses were re-coded into the categories listed in Table 71. Each leaseholder's response received up to three codes, depending on the number of suggestions made. Forty-nine percent of respondents (173 of 354) provided suggestions for improving the relocation process. In general, respondents made suggestions for better communication, information sharing, and attentiveness.

Table 71. Suggestions

Q174. Suggestion	% Base N=173
Better Communication	12
More time for relocation	21
CHA should provide more information	13
CHA should provide check on residents after move	5
More relocation Counselors to help find apartments	6
Other	52

Note: Base N reflects number of leaseholders responding and %s reflect percentage of leaseholders offering each suggestion. Leaseholders could provide more than one suggestion. A total of 178 suggestions were collected for Q174.

APPENDIX A-1

Methodology

Appendix A-1: Survey Methodology

1.1 Design

The Phase III Follow-up Survey builds upon previous survey research of the CHA's Housing Transformation Initiative (see Table A-1.1) conducted by NORC. In 2002 and 2003 NORC collected baseline and follow-up data from a sample of the Phase II leaseholder population (leaseholders scheduled for relocation in 2002 or whose process started in 2002).⁶ Beginning in late 2003, NORC conducted baseline interviews with a sample of the Phase III leaseholder population (leaseholders scheduled for relocation in 2003 or whose process began in 2003).⁷ NORC followed up with the Phase III sample again in late 2004. (See Section 1.6 Sample for response rates).

Table A-1.1. Sampling Timeline

	2002	2003	2004
Phase II	Baseline N=1035	First Follow-Up N=400	
Phase III		Baseline N=400	First Follow-Up N=400

Note: An additional adult member of the household was randomly selected and interviewed for the Phase III Baseline Survey (N=116).

1.2 Questionnaire

The Phase III Follow-Up Questionnaire included the following 12 sections. The questionnaire can be found in Appendix A-2.

1. Informed Consent. This section explains the purpose of the survey, for whom the study is being conducted, how long the survey takes to complete, voluntary participation and confidentiality. Interviewers read the informed consent statement aloud to respondents and answered any questions they had before proceeding.
2. Adult Roster. The Adult Roster is a grid for recording information about all of the individuals ages 18 and older who live in the household: first name or initials, sex, age, relationship to leaseholder, employment status, education level, and length of time living in the unit.
3. Housing Status. This section begins with a grid for recording the leaseholder's permanent housing choice, temporary housing choice, relocation status in January 2004 and relocation status at the time of the interview. Information from the grid guided the interviewer to one of five subsections, Sections 3A to 3E, that asked detailed questions about the leaseholders housing status, the process of relocation, and working with the Relocation Counselor.

⁶ National Opinion Research Center. 2003. *2002 Resident Relocation Survey Methodology and Results*. Chicago, IL: National Opinion Research Center; National Opinion Research Center. 2004. *Resident Relocation Survey: Phase II First-Follow-Up Methodology and Results*. Chicago, IL: National Opinion Research Center.

⁷ National Opinion Research Center. 2005. *Resident Relocation Survey: Phase III Baseline Methodology and Results*. Chicago, IL: National Opinion Research Center.

4. Economic Hardship. These questions ask leaseholders about the hardship they may be experiencing in paying bills or getting goods and services due to lack of money.
5. Social Services Utilization and Effectiveness. This section asks leaseholders about the social services they or another member of the household needed, whether the services were obtained, how helpful the services were, and who provided the services.
6. Current Housing Unit and Neighborhood. This section includes questions on the neighborhoods and apartments in which the leaseholders live. The questions ask about living conditions, amenities and activities in the neighborhood, transportation, involvement in the neighborhood, and interactions with others in the neighborhood.
7. Health Assessment. This section asks general questions about the leaseholder's physical and mental health.
8. Children in the Household. This section was directed at leaseholders with minor children in the household (children under the age of 18). For each eligible household, children were enumerated on a household roster, which also collected information on the child's sex, age, relationship to the leaseholder, and the person in the household primarily responsible for the child's care. One focal child was selected at random from the roster. The leaseholder was asked questions about the focal child's experiences, with emphasis on the child's school, activities, health, time spent playing outdoors, and child care.
9. Overall Satisfaction. This section asks about the leaseholder's overall satisfaction with the relocation process.
10. Demographic Information. This section includes questions on the leaseholder's sex, age, ethnicity, race, marital status and income.
11. Locating Questions. This section asks leaseholder's for information on how NORC can contact them about participation in future surveys. Interviewers collect information on name, address, social security number, driver's license number, and contact information for two people who are likely to know how to locate the leaseholder in the future.
12. Interviewer Observations. Interviewers recorded their observations in this section of the questionnaire. Information on the interview itself and the condition of the leaseholder's building were recorded.

1.3 Survey Materials

The following materials were developed for leaseholders:

Advance Letters. These letters, addressed to leaseholders, explain the purpose of the survey, introduce the funding source and the organization collecting the data and notes that the interview would be conducted in-person. A copy of the letters can be found in Appendix A-6.

Brochure. The brochure describes the goals and specific features of the study. A copy of the brochure is provided in Appendix A-7.

Hotline Card. The yellow card was provided to respondents who verbalized to survey interviewers a need for help or social services. The card contained the telephone number for the Service Connector Hotline and the City Services Hotline.

The following materials were developed for the use by NORC survey interviewers.

Interviewer Manual. The manual includes an overview of the project, explains survey protocols, and describes administrative procedures.

Frequently Asked Questions and Answers (FAQs). The FAQs list anticipated questions and their answers to ensure that respondents receive consistent and accurate information about the study.

1.4 Institutional Review Board

NORC's Institutional Review Board (IRB) must review and approve of all research protocols before any research can be conducted. An application, an abstract of the study, and the materials developed for respondents were reviewed and approved by the NORC IRB. A copy of the IRB certificate can be found in Appendix A-8.

1.5 Staffing

The NORC project team included Project Director Cathy Haggerty, Statistician Colm O'Muircheartaigh, Principal Research Scientist Ken Rasinski, Senior Survey Methodologist Lisa Lee, Survey Methodologists Ned English and Jennifer Beck, Survey Specialist Dina Berin, Field Staff Ezella Pickett and Linda Woodley, and IT Manager Syed Ahsan.

Eleven interviewers conducted in-person interviews. All of the interviewing staff were African American women between the ages of 22 and 59. Three of the interviewers were current or former CHA residents.

1.6 Sample

To understand the Phase III follow-up, it is necessary to first explain the Phase III baseline sample. NORC received a list of 1547 leaseholders from the CHA in December 2003 to use for the Phase III baseline, consisting of the Phase III cohort of leaseholders. NORC identified on this list 365 leaseholders that were members of both the Phase II and Phase III cohorts and therefore had a chance of being selected into the previous Phase II follow-up sample. In fact, 156 of these 365 leaseholders were selected as part of the Phase II follow-up sample. Another 36 of these 365 leaseholders had taken part in Phase II follow-up pretests. We excluded these $156 + 36 = 192$ Phase II/Phase III leaseholders from the Phase III frame. Consequently, NORC had $1547 - 365 = 1182$ Phase III only leaseholders and $365 - 192 = 173$ Phase II/III leaseholders who had not been approached since the Phase II baseline survey.

For the Phase III baseline, NORC selected a total of 400 leaseholders from this frame. Of these 400, 350 were drawn from the 1182 Phase III only list and 50 were drawn from the 173 Phase II/Phase III list. A stratified systematic sample was selected in each

instance. The tables below present the population and sample distribution by development for the Phase III baseline.

For the Phase III follow-up, NORC attempted to interview all 400 leaseholders selected in the baseline. Interviews were attempted at all 400 baseline-selected leaseholders whether they completed a baseline interview or not. While 363 respondents completed interviews in the baseline, 357 did so in the follow-up. Of the 357 interviews completed in the follow-up, 340 also completed interviews in the baseline while 17 were new to the follow-up. Tables A-1.2 through A-1.4 below summarize the results of the Phase III baseline and follow-up by development.

Table A-1.2. Population and Sample of Leaseholders in Phase III Frame Only

Development	Population Count	Percent	Sample Count	Sample Percent
ABLA Homes	70	5.9	21	6.0
Hilliard Homes	177	15.0	53	15.1
Robert Taylor Homes	183	15.5	54	15.4

TOTAL	1355	400	363	340	357	89.2

Note: B=Baseline, P=Panel (leaseholder participated in both Baseline and Follow-up), and F=Follow-up.

1.7 Preparation for Data Collection

To prepare for data collection the survey team performed the following tasks: (1) reviewed the survey plan drafted for the Phase III baseline survey; (2) reviewed and modified the safety protocols; (3) re-established our Hyde Park site office; (4) developed computing system specifications for the receipt, data-entry and coding of questionnaires; (5) prepared respondent materials; and (6) created interviewer training materials.

The survey plan, as specified for Phase III baseline did not require further modification for Phase III Follow-Up.

Rigorous safety procedures were used for Phase III Follow-Up data collection. Interviewers worked in teams and called the field manager at the end of each workday. Interviewers with evening appointments gave the name and address of the respondent to the field manager and always had another interviewer accompany them on that interview.

The Hyde Park office space used during the previous data collection efforts were again secured for Phase III follow-up. This office was equipped with desks, computers, and a table and chairs to accommodate small group meetings. The space was used throughout the field period by the field manager and interviewers for weekly one-on-one and group meetings. When visiting the office, interviewers could also restock their supply of respondent and interviewer materials. When not in the field with the interviewers, the Field Manager was at this office reviewing questionnaires, meeting with interviewers, or updating the computing system with the most current case status information.

The computing system requirements for Phase III follow-up were identical to previous rounds. There were no changes needed to the receipt system – that system was simply used again. The receipt system allowed the field manager to monitor the status of completed and pending cases. Since a different questionnaire was used, a new data entry and coding system was developed. The computer assisted data entry (CADE) system was used to capture questionnaire data. The coding system was a spreadsheet program that enabled open-ended and other-specify responses to be sorted and coded. Once the questionnaire

was finalized the system specifications were documented during a walkthrough of the instrument with the survey and programming staff.

Respondent materials, as described in Section 1.3, were developed using the previous rounds as a model. NORC sent the advance letter prior to the initial contact from an interviewer via U.S. First Class mail. Interviewers carried copies of the advance letter to provide to respondents who failed to receive the advance letter via U.S. mail.

Training materials, as described in Section 1.3, were adapted from training materials used in previous rounds. The materials convey the important aspects of the survey and facilitate mastery of the survey instrument. The materials include a training agenda, a manual for interviewers, question by question specifications, prepared answers for anticipated questions about the survey, and mock interviews to be used during practice sessions.

1.8 Interviewer Recruitment and Training

Interviewers staffed for Phase III data collection who worked efficiently and successfully completed their assignments were invited to collect data for Phase III follow-up. Nine of these interviewers were available to work during the time period scheduled for data collection. Their efforts were supplemented by two additional NORC experienced interviewers.

In addition to the one-day General Training all NORC interviewers receive, NORC conducted a two-day project-specific training to teach interviewers about the Resident Relocation Study, the survey instrument and other important aspects of the survey. The training took place at the NORC Hyde Park office on October 14 and 15, 2004.

1.9 Data Collection

This section provides a brief overview of the Phase III data collection process.

Schedule. Data collection was scheduled to last three months. Data were collected between October 2004 and January 2005.

Safety Protocol. Interviewers worked in teams of two and usually conducted interviews between the hours of 10am and 4pm. At the interviewers' discretion an interview could be completed alone. Interviewers with appointments during the evening hours completed those interviews with another interviewer present.

Respondent Incentives. An incentive payment of \$15 was given to each leaseholder at the end of the interview. Respondents signed a statement indicating they received payment.

Survey Management. One field manager supervised 11 field interviewers. Interviewers attended weekly one-on-one meetings with the field manager at the Hyde Park office. At this meeting, the field manager reviewed completed interviews, provided feedback about the quality of the work, and discussed strategies to gain the cooperation of respondents.

Validation. Ten percent of the respondents interviewed by each interviewer were contacted post interview to ensure that the interview was completed according to specifications and that the interviewer performed in a professional manner.

Results. NORC interviewers completed 357 interviews with leaseholders for an overall response rate of 89%.

1.10 Data Preparation

This section describes how the completed questionnaires were processed by NORC central office staff.

Editing. Once per week interviewers delivered the cases they completed to the field manager. The field manager and interviewer reviewed each case together and checked the questionnaires for the following: (1) the skip patterns were followed properly, (2) data had been recorded at all critical questions and, (3) the verbatim responses were legible. Prior to data entry, another editing step was performed to prepare the case for data entry after the case was received at the NORC data preparation center.

Data Entry. After the field manager completed the case review and edit steps, the completed cases were transferred via interoffice mail delivery to the NORC data preparation center. The cases underwent a second editing and were recorded as received. Data from the cases were entered into the computer assisted data entry (CADE) system. A random ten percent of the cases were data entered twice to check for errors that may be introduced during data entry. The error rate was less than 1% and errors identified by this process were corrected.

Coding. The survey instrument captured a limited number of open-ended or verbatim responses. Open-ended responses were exported to an Access Database to assist in sorting and reviewing responses. A survey specialist and research scientist categorized the responses and then assigned codes to each category.

Data Cleaning. After the data were keyed, a set of question frequencies were reviewed to check that the requisite number of responses were recorded at each question. Special cross tabs were produced during this process to facilitate correction of the dataset when the requisite responses were missing or too many responses were present.

Dataset. Questionnaire data were imported to SAS to perform the analysis for this report. A copy of the questionnaire weighted frequencies can be found in Appendix A-3.

1.11 Weights

A sampling probability was calculated for the 350 cases from the 1182 Phase III only leaseholders. This value equaled $350/1182$, or .2961. Next, a sampling probability for the remaining 50 Phase II/Phase III cases was calculated. For simplicity, it was assumed that the 50 cases were sampled from the 365 Phase II/Phase III leaseholders. This sampling probability equaled $50/365$, or .1370.

For the Baseline survey, data were collected from 363 of the 400 cases, giving a response rate of 91%. For the Follow-up survey data were collected from 357 of the 400 cases, giving a response rate of 89%. Twenty-three leaseholders who participated in the Baseline survey did not participate in the Follow-up. Seventeen leaseholders who participated in the Follow-up survey did not participate in the Baseline. Both Baseline and Follow-up data were collected from a total of 340 leaseholders.

A preliminary case weight was calculated by applying the inverse of the first sampling probability ($1/.2961=3.377$) to the 350 Phase III only cases and the inverse of the second sampling probability ($1/.1370=7.300$) to the 50 Phase II/Phase III cases. To reflect participation in the Baseline wave, the Follow-up wave and both waves (i.e., those in the panel), three separate weights were calculated, one to use when analyzing the 363 Baseline cases (called `b_wt2` in the data file), one to use when analyzing the 357 Follow-up cases (called `fu_wt` in the data file) and one to use when analyzing the 340 panel cases (called `panel_wt` in the data file). Because the response rates were generally high and did not vary markedly by building no adjustment for nonresponse was made. However, each weight was scaled to its respective sample size by dividing it by the average weight for the sample in question.

Section 1: Informed Consent

Hello, my name is _____ [INTERVIEWER NAME]. May I please speak with [LEASEHOLDER NAME]?

[TO THE LEASEHOLDER:]

Hello, my name is _____ [INTERVIEWER NAME]. I am from NORC, a National Organization for Research at the University of Chicago.

Last Winter, we asked you or attempted to ask you to be a part of a survey about the Chicago Housing Authority's Plan for Transformation project, which is relocating leaseholders from CHA developments due to building demolition and rehabilitation. The MacArthur Foundation wants to find out if you are getting the help that you need and if your rights as a leaseholder are respected.

We are asking the same 400 people we interviewed or attempted to interview last winter to take part in this follow-up survey. Your answers will help to improve the relocation process in the future. The survey will take about 1 hour. It is completely up to you to decide whether you want to do the survey. Whether or not you decide to participate, you will not lose any rights or services you are entitled to.

If you decide to participate, we will ask you about your relocation experiences. We will also ask you about the housing unit and neighborhood you live in now and how the relocation has affected you and other household members.

We will keep the information you give us private. The CHA will not be able to link your name with any answers you give. Any reports released on this survey will summarize the findings, without giving names or other information that would identify you.

If you have any questions about this study or about the relocation project, please call our toll-free project number at 1-866-264-8222.

Section 2: Adult Roster

I'd like to ask you about everyone living in this household who is 18 years old or older. We will start with you, then continuing with the oldest, please tell me the names or initials and ages of every adult over the age of 18 who lives here. Please be sure to include roomers, people living here for two months or more, anyone living here who has no where else to live, and those who usually live here but are away because they are at school, in a hospital or some other place temporarily.

→ SKIP TO Q34

33.What neighborhoods or cities did you tell the Relocation Counselor you wanted to move to?
[INTERVIEWER PROBE FOR NAME OF NEIGHBORHOOD, NAME OF CITY, OR INTERSECTION]

DON'T KNOWDK

REFUSED REF

34. Did a Relocation Counselor help you look for an apartment?

YES1 → SKIP TO Q36
NO2
DON'T KNOWDK → SKIP TO Q36
REFUSED REF → SKIP TO Q36

35. Here is a list of possible reasons why the Relocation Counselor did not help you look for an apartment. Tell me which ones apply to your situation?

	Yes	No
a. I got the help I needed from friends or family	1	2
b. I decided to look on my own	1	2
c. It was difficult to make an appointment	1	2
d. The wait time was too long	1	2
e. I work during the hours that the counselors can meet	1	2
f. I didn't have child care	1	2
g. There was too much paperwork	1	2
h. My appointment was rushed	1	2
i. The counselor was rude or unpleasant	1	2
j. Other (specify) _____ _____ _____		

36. To help us understand your experience working with a relocation counselor I am going to read a list of statements. Please tell me if each statement is true or false.

	True	False
a. The counselors were easy to make appointments with	1	2
b. I often had to wait a long time before getting help	1	2
c. It was difficult to understand the materials they gave me	1	2
d. I usually had enough time during my appointments	1	2
e. The counselors were unpleasant or rude	1	2
f. My appointments were usually rushed	1	2
g. The counselors helped me with what I needed help with	1	2

37. How many apartments did the Relocation Counselor tell you about? (Including those that were on a list)

_____ NUMBER OF APARTMENTS
DON'T KNOWDK
REFUSED REF

38.How many apartments did the Relocation Counselor take you to see?

_____ NUMBER OF ADDRESSES

DON'T KNOWDK

REFUSED REF

39.While you (are/were) searching for an apartment, (do/did) you need help with ...

40.[IF YES:] Has the Relocation Counselor given you the help that you needed?

	YES	NO	DON'T KNOW	REF
a. Choosing an area to move to?	1	2	DK	REF
b. Finding child care?	1	2	DK	REF

YES	NO	DON'T KNOW	REF
1	2	DK	REF
1	2	DK	REF

41.You may have decided not to take apartments that the Relocation Counselor told you about. From Showcard F can you tell me the number next to the **main** reason you made this decision. READ CATEGORIES BELOW.

- Bad neighborhood.....1
- Landlord won't accept children2
- Stores too expensive.....3
- Apartment in poor condition4
- Apartment not big enough.....5
- Apartment not near schools6
- Apartment not near family or friends.....7
- Did not like apartment8
- Some other reason (SPECIFY BELOW).....9
- DOES NOT APPLYN/A
- DON'T KNOWDK

Section 8: Children in the Household

123. I would like to find out a little more about the members of your household. First of all, are there any children under the age of 18 currently in your household?

- YES1 → GO TO R.10
 NO2 → SKIP SECTION 9, Q163
 DON'T KNOWDK → SKIP SECTION 9, Q163
 REFUSED REF → SKIP SECTION 9, Q163

I'd like to ask you the first names or initials of everyone living in your household who is under age 18, starting with the oldest person under age 18. Please be sure to include roomers, children who usually live here but are away temporarily – on vacation, at school, temporarily in a hospital, and so on. Please be sure to include babies or small children. I'd also like to remind you that your responses are confidential, and no names or identifying information will be shared with anyone, including the CHA. Let's start with the oldest child ...

R.10 Row	R.11 Name or initials	R.12 Is NAME male or female?	R.13 Age	R.14 Relationship to leaseholder (Choose 1-7 below)	R.15 Person in household primarily responsible for Child (choose 8-13 below)

Advance Letters

NORC
*A national organization for research
at the University of Chicago*

Fall, 2004

Dear Leaseholder:

Over the last couple years, NORC has interviewed many public housing residents who have been relocated as part of the Chicago Housing Authority's Plan for Transformation. We are now conducting a follow-up interview to get an update on relocation and to learn about the experiences people are having in their new neighborhoods.

You are one of 400 respondents we have randomly selected from the more than 1500 respondents we interviewed or attempted to contact last fall to take part in this follow-up interview. The interview covers topics such as your relocation experiences, the social services you need and receive, your experiences in your neighborhood, your health, how relocation has affected any children that may live in your household, and your satisfaction with the relocation process. This interview should take about 1-hour to complete and we can offer you \$15 for your participation.

Your participation is completely voluntary, and you may refuse to answer any question or discontinue your participation at anytime without penalty to you. Your name and other identifying information will not be connected to the answers you provide and will not be known to anyone outside the research team.

If you have any questions please contact our toll-free number (866) 264-8222.

Sincerely,

A handwritten signature in cursive script that reads "Catherine Haggerty".

Catherine Haggerty
Resident Relocation Follow-up Survey Director

Winter, 2004

Dear Leaseholder:

Over the last couple years, NORC has interviewed many public housing residents who have been relocated as part of the Chicago Housing Authority's Plan for Transformation. We are now conducting a follow-up interview to get an update on relocation and to learn about the experiences people are having in their new neighborhoods.

You are one of 400 respondents we have randomly selected from the more than 1500 respondents we interviewed or attempted to contact last fall to take part in this follow-up interview. The interview covers topics such as your relocation experiences, the social services you need and receive, your experiences in your neighborhood, your health, how relocation has affected any children that may live in your household, and your satisfaction with the relocation process. This interview should take about 1-hour to complete and we can offer you \$15 for your participation.

Your participation is completely voluntary, and you may refuse to answer any question or discontinue your participation at anytime without penalty to you. Your name and other identifying information will not be connected to the answers you provide and will not be known to anyone outside the research team.

If you have any questions please contact our toll-free number (866) 264-8222.

Sincerely,

A handwritten signature in cursive script that reads "Catherine Haggerty".

Catherine Haggerty
Resident Relocation Follow-up Survey Director

As you know,
public housing is changing. High
rises are being closed and replaced
with new communities for CHA
residents. In order to redevelop
these areas, residents need to
move.

Once again, interviewers from NORC
would like to ask you about your
experiences with relocation. Please
take the time to talk with them.

This study is meant to help improve
the relocation process for residents
like you who
will be
relocating in
future years.
Your
responses
can greatly
help improve
the quality of
this process.

Where Can I Get More Information?

For additional information,
please contact:

Resident Relocation Follow-up Survey

NORC
*A national organization for research
at the University of Chicago*

What is the Resident Relocation Survey?

The Resident Relocation Survey is a study of the leaseholders who are relocating from CHA buildings. Once again, interviewers from NORC would like to ask you about your experiences. Interviewers from the National Opinion Research Center (NORC), a non-profit research center that is part of the University of Chicago will be speaking with you about your experiences with relocation. This study is a follow-up to a study that was first conducted in the winter of 2003/2004.

Why Me?

- We would like to get information that reflects the lives of all people involved in relocation.
- To get a true picture, it is important to hear directly from leaseholders about the relocation process.
- Only you, someone who has experienced relocation first-hand, can give us answers that could help improve the relocation process in the near future.

What is the Purpose of the Study?

This study will:

- Help improve the relocation process for leaseholders like you that will be relocating in the future.
- Find out which CHA relocation services are helpful and which need improvement.
- Learn how residents like you are doing as you prepare to move and after you have moved.

What Questions Will I Be Asked?

NORC interviewers will ask you questions about:

- Your access to services.
- Your experiences during and after your move.
- Neighborhood services
- Your health

YOU ARE VITAL TO THE SUCCESS OF THIS IMPORTANT STUDY.

- The survey of the leaseholder will take about 1 hour and we will pay you \$15 for your time.
- The survey of another adult in the household will take about 20 minutes and we will pay you \$10 for your time.
- This study is voluntary.
- This study is important.
- This study is confidential.
- You can stop at any time.

NORC
